MARYLAND—"Every seed came up!"—Mrs. R. B.

OHIO—"I never had so many compliments from neighbors and passersby for the monstrous, beautiful snapdragons . . . to all questions I answered only that they were Burpee's new tetra snaps."—Mrs. H. A. H.

CONNECTICUT—"I individually planted every zinnia seed in that packet and I am sure 98 per cent of them came up. It is the biggest dime's worth I ever knew. Thank you for these beautiful flowers."—James M.

VIRGINIA—"We were astounded with the productivity secured from your Burpee Fordhook lima beans. . . . Your tomatoes also were the envy of the neighborhood."—Mrs. G. J. S.

TENNESSEE—"I am enclosing a program of the garden contest. . . . You will see that I was the winner. . . . My garden was planted with Burpee seeds."—O. Z. L.

VERMONT—"We have a short season and have to use much care to get results, but with such good seed as Burpee's the effort is well worth while."—A. M.

CANADA—"I have had great success with your seeds and have introduced Burpee's Jubilee tomatoes. No one in this district had ever seen such lovely specimens. They were like large oranges. . . ."—Mrs. R. E. G. (Ontario).

ALABAMA—"Blue Parrot tulips . . . most beautiful and gorgeous I have ever seen and brought forth comments from scores of admirers . . . the flower show had nothing to compare with them."—Mrs. J. M. B.

NEW HAMPSHIRE—"Every seed planted grew—and what a crop!"—C. A. C.

NEW YORK—"My people in Finland . . . said no one had ever seen such beans, peas and Swiss chard and many other things we sent. All summer two big families enjoyed the garden which they called the American garden. People came from all over to admire it."—Mrs. A. A.

ENGLAND—"Plantings from your seeds are a month in advance of any yet seen and are the cause of considerable envy."—B. B.

Some people get specific

"I planted 30 seeds of your Burpee Hybrid cucumbers last year but a bad storm washed out 16 seeds leaving me 14 seeds which grew into hardy vines. And from the 14 vines I canned 60 quarts of pickles besides what we used on the table and what I gave to admiring neighbors. . . ."—Mrs. C. P. (Ohio)

"I have a Burpee Hybrid Cucumber before me that weighs 3½ pounds. I am keeping it as exhibit 'A'. . . ."—G. C. C. (Pennsylvania)

"My regal lily had 27 blossoms on it."—Mrs. L. H. (Virginia)

"Sweet peas 7 feet tall, 13 inch stems!"—A. T. H. (New York)

"Cosmos . . . like 'Jack's bean stalk'. . . . The height is over 12 feet!"—Mrs. G. W. C. (New Jersey)

"I bought a 10¢ packet of your extensively advertised Burpee gigantic zinnias—planted, fed, watered and cut 1684 blooms!"—Mrs. T. A. N. (Maryland)

Some say it this way

"I cannot tell you how appreciative we gardeners should be of your efforts in developing such wonderful products."—Mrs. A. A. F. (New Jersey)

Another, quite simply

"Hurrah, hurrah for Burpee seeds!"—Otto H. (New York)

Even beginners can be winners

"Last year I took 28 first prizes, three second prizes and four third prizes. Not a bad average for an amateur gardener—and all from Burpee's seeds."—A. F. P. (New York)

"Thank you for the splendid results I achieved with the vegetable seeds I ordered from you. . . . Never before had I planted a garden but I made the attempt under the guidance of a friend. The result was so gratifying that I decided to always have fresh picked vegetables from June to frost. Besides I canned enough to provide us throughout the winter."—Mrs. D. G. (New Jersey)

"Won second prize (for gardens) last year and it was our second year to ever try gardening. Seeds you furnished certainly were good—I think every seed came up. We had all we could use, gave to the neighbors and are just using the last of the vegetables we canned."—Mrs. A. E. S. (Ohio)

Experts agree

"In order of U. S. No. 1 yield for the season are Burpee Clinton Hybrid (tomatoes) with a yield of 18.5 tons to the acre, then two other Burpee hybrids . . . Burpee Clinton Hybrid tomato was outstanding in the quality of its fruit. . . ."—Report of Mid-western trials at Ames, Iowa, 1946.

"Very old gardeners and very experienced . . . have spoken to me about your seeds with praise . . . wonderful germination . . . crops remarkable in size and quality."

—Norman O. (Llanfairfechan, Wales)

People like the way we do business, too

"I never dealt with anyone locally or otherwise who guaranteed their products and backed up the guarantee . . . not even knowing the conditions . . . no questions asked. Here's appreciation for an honest firm!"—J. W. S. (New York)

"I like your service very much—the seeds get here so quickly."—H. H. (Massachusetts)

"Thank you for your consideration with my small order."—Rose J. (Maryland)

And it's been like this for years

"This coming spring when I send in my order for seeds it will have been the 25th year and in all of that time I never had but one packet that failed to grow and that was the fault of the weather. . . ."—Paul J. (Kansas)

"After using them for 30 years, I am especially impressed by the vitality of your seeds. . . . The size of my order is definitely no indication of my enthusiasm for your products."—Dr. L. F. H. (Massachusetts)

"For many years I have marvelled at the fine products we raise from your seeds. . . ."—Mrs. A. G. (Pennsylvania)

As one of our good friends sums it up

"What a garden! Both vegetables and flowers were and still are the talk and envy of the neighbors, thanks to Burpee seeds. The hybrid cucumbers were a picture . . . luscious and beyond description. And the zinnias! If I told you the diameter of some of them you would surely doubt my statements. Once again let me express my pleasure and the joy of working with such fine seeds."—Mrs. Lois P. (Massachusetts)

Burpee's *NEW* LUTHER BURBANK ZINNIAS

No. 2910 Pkt. 200 seeds (value 50¢) for only 25¢; 2 pkts. 45¢;

David Burpee
who perfected these
great new zinnias, the
work on which was
started by his famous
cousin, Luther Burbank.

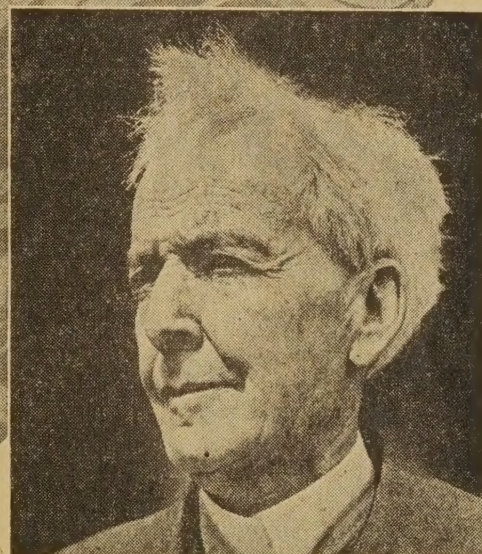

Luther Burbank Zinnias are of the lovely, delicate pastel or art shades; the many self colors range from cream and primrose through delicate buff-yellow, canary-yellow, ivory, soft salmon, warm rose, chamois, apricot, peach, blush pink, salmon-pink to clear, bright rose. There are also unusual two- and three-color combinations of soft and light shades in some of the individual blooms. When an occasional pale lavender or light orange bursts into flower, it is always a tone that blends harmoniously with the others.

Flowers grow 5 to 5½ in. across and are composed of numerous petals which curl back somewhat to form thick flower heads 2 to 3 in. deep. Individual petals turn under at the end, giving them an unusual effect, thus adding charm and interest.

Plants are strong growing, 3 to 4 ft. tall, well-branched so that an abundance of long-stemmed flowers is assured for cutting.

Vigorous plant growth, profuse blooming, large flowers, and a well balanced range of pastel colors combine to make Luther Burbank Zinnias a novelty worthy of the tribute to the plantsman for whom they were named.

Luther Burbank

The plant wizard of the world, in whose honor this new, delightful blend of giant zinnias is named.

From Mr. Burbank's numerous letters to us, we quote: "I have had the pleasure of sending many hundreds of customers to you for seeds. Personally, I consider your house the most reliable seed house in the world, and I think this would be the verdict of the public at large."

BURPEE'S *Super Giant* ZINNIAS

3175 Burpee's Super Giants are truly giant, $5\frac{1}{2}$ to $6\frac{1}{2}$ in. across, in a full range of all colors found in zinnias including some of the loveliest colors and combinations of colors ever seen in this flower. Rare and unusual shades of cream, buff, apricot, salmon, rose and orange predominate, with a few yellows and whites; scarlet and crimson are not prominent, though there are some very attractive flowers in these colors. One is impressed by the many two-tone and three-tone color effects seen in some of the blooms of Burpee's Super Giants.

Flower shapes vary too. There are several types of petal forms from long, narrow petals like those of flower in upper right to long, broad ones or medium-long, broad ones as seen in lower two blooms; some petals are flat while others are curled and wavy. Some blooms are deep like Dahlia Flowered, others more flattened like Giants of California. This diversity of petal and flower form, together with a most amazing assortment of solid colors and color combinations, makes Burpee's Super Giants a most interesting and delightful blend of zinnias. Striking in the garden; invaluable for cutting. 3 ft. **Pkt. 25¢; $\frac{1}{8}$ oz. 60¢; $\frac{1}{4}$ oz. \$1.00; $\frac{1}{2}$ oz. \$1.75; oz. \$3.00**

Burpee's Giant Dahlia Flowered ZINNIAS

These zinnias are outstanding both for the exquisite form of their long-stemmed flowers, which resemble giant dahlias, and for the lovely shades included in their range of color. The individual

blooms grow about 5 in. across and 2 in. and more in depth. The well-branched sturdy plants grow 3 ft. high. Showy in the garden; wonderful for cutting as flowers have remarkable keeping qualities.

2901 Canary Bird A most pleasing shade of primrose-yellow which combines well with Dream or Royal Purple.

2894 Dream An unusual tone of deep lavender turning to a rather rare shade of mallow-purple as the flowers age.

2896 Exquisite Light rose with deeper rose center, creating a most pleasing two-toned color effect; lovely for cutting.

2888 Golden Dawn Attractive golden yellow—almost a light orange shade with a reddish center. Rich and colorful.

2891 Illumination Enormous flowers of deep tyrian rose—a beauty.

2879 Maiden's Blush Well-shaped rounded flowers of a light flesh or shell-pink color deepening a little as flowers age.

2897 Oriole Attractive two-toned flowers—golden orange outer petals in contrast to a reddish orange center.

2900 Polar Bear The best of all white zinnias; flowers are borne on long stems.

2914 Royal Purple Distinct color in this class—a deep, rich royal purple without any hint of blue. *All-America Winner.*

2904 Scarlet Flame Bright scarlet nicely blended with orange. A vivid color.

Individual flowers are quite large, $1\frac{3}{4}$ in. across and $1\frac{1}{2}$ in. deep when well grown. The upper lip broadens and recurves gracefully. From the rounded portion of the lower lip there is a protruding flare which is slightly frilled. Between the lips, extending out from the throat, are several small, wavy accessory petals which add grace, charm and refinement, as well as surprise, to an already handsome flower.

1610 BURPEE DOUBLE

Shown in color on inside front cover

In addition to a new and pleasingly different form, the flowers are of a rich, deep golden yellow color throughout; except for the back of the buds which are flushed rose-pink. When fully open, the pink coloring disappears entirely.

The central spike grows about 28 in. tall and flowers first, followed by many lateral branches which arise from the main stem close to the ground. All the lateral stems bloom at one time so that the plants produce a great mass of color in beds or borders. Besides being valuable for garden effect, Burpee Double Snapdragons are unsurpassed for cutting. In some of the flowers, there is a delicate, spicy fragrance.

New Type of Single Snapdragons

1525 Burpee's Fairy Rose is the result of treating a special selection of snapdragons with colchicine, but unlike our Tetra Snaps (listed on page 12) the flowers are smaller and more sprightly, stems slender with more of them produced on a plant. It has great appeal for garden use and cutting, especially where a light, airy, graceful effect is desired.

Plants, at first, are bushy and compact, but later spread 16 to 30 in. across depending on soil and climate thus producing numerous, erect spikes, 2 ft. tall, studded with slim, crisp flowers, 2 in. long and 1 in. across at the flare of lower lip. The general color of the standard is rose bengal; the rounded portion of the lower lip is sulphur-yellow which softly suffuses the standard and the flare of the lower lip to create a delicate shade of apricot. Distinct new beauty in color and form.

Tetra Snaps are a new "scientific" creation—a new group of snapdragons originated through the treatment of the best regular or diploid varieties with colchicine—a drug or chemical derived from the bulbs of fall crocus. The plants not only have larger flowers but are stronger and huskier, often taller than diploids with glossy, dark green foliage, thick and almost leathery in texture; the stems, too, are stouter. Under general field conditions the central spikes grow 2 to 2½ ft. in height; these are surrounded by lateral spikes of lesser height. Plants are base branching so that long-stemmed flowers are assured for cutting and having good substance adds to their keeping value. The flowers are the largest of all snapdragons, many distinctly and attractively ruffled. Genetically, Tetra Snaps are known as tetraploid snapdragons for, when examined under the microscope, one finds they have twice the number of chromosomes in their cells as regular or diploid snapdragons—we call them tetra snaps for short.

1513 Tetra Orchid Rich shade of orchid-purple prettily marked with a sulphur-yellow blotch on lower lip. The massive spikes of large, closely placed, wide open flowers make a most impressive showing in beds and borders, or as cut-flower subjects. **Pkt. 35¢; 3 pkts. \$1.00**

1576 Tetra Superfine Mixture Every color seen in this glorious flower, plus some new ones. There are shades and variations of bright orange, light orange, peach-orange, rose-orange, bronzy yellow, golden yellow, canary yellow, yellow-flecked red, antique bronze, reddish bronze, orchid, scarlet-tipped yellow, scarlet, crimson, pinks from apple-blossom to deep rose, pink-flushed yellow, pink and white combination, pure white and others of harmonious tone blendings; a most unusual mixture.

SNAPDRAGONS

(botanically antirrhinums) have always been universal favorites for color in the garden, in the greenhouse during the winter, and as cut flowers. Of easiest culture, succeeding in ordinary well-drained garden soil—in full sun or semi-shade. The gorgeous flowers are freely produced for several months, and until frost where conditions are favorable. Sow seeds outdoors when soil has become quite warm; for earlier blooms sow indoors six weeks before your regular outdoor planting time. Full cultural directions on every packet. Best treated as annuals, although they are biennials in sections having mild winters.

Burpee's Annual LARKSPURS

One of the most beautiful and desirable flowers for the garden and cutting. Easily raised, quick growers, and very free flowering; produce a wealth of large, double blooms on long, attractive spikes. Even the deep green, finely divided foliage is pretty when plants are not yet in bloom. The culture of annual larkspur is quite easy. Plants do best in a sunny position in rich, well-drained garden soil free from fresh manure.

They like cool weather in which to germinate and to grow best. Seed should be sown as early in the spring as the ground can be worked—the earlier, the better—but do not sow in cold, wet ground. We suggest sowing seed where plants are to bloom, as they sometimes resent being transplanted. When seedlings are large enough to handle, thin them to stand 1 to 1½ ft. apart. We offer your choice of four distinct types.

Perennial Larkspurs, see Delphinium, page 51.

2153 Giant Imperial Larkspur, Mixed Colors Pkt. 15¢

Giant Imperial—Grow Upright Like Delphiniums

Attractive flower-spikes, 3 to 4 ft. tall, which stand upright, close to the center stalk—a decided improvement on older spreading types especially where space is limited. Well-formed, large, double flowers.

Strong, upright spikes are produced from the base, presenting a solid, erect, column-like appearance, the upper one-third being covered with large double flowers, 1½ in. across. Come into bloom a little later than the Giant Imperials thus prolonging the flowering season. These extremely long-stemmed larkspurs are especially desirable for all cut-flower purposes and a row of them in the garden is most striking. They grow about 3½ ft. tall.

Burpee's Fragrant NASTURTIUMS

Ever popular plants of the easiest culture, blooming most profusely in ordinary, well-drained garden soil. A soil that is overly rich will cause plants to produce more leaves than flowers. They are then most useful plants for dry, sandy, or gravelly locations. Nasturtiums may be had in a great variety of shades and color combinations, single or double flowers and tall or dwarf growing. Their varied and brilliant colors, different shapes and refreshing fragrance make them most desirable for cutting.

Dwarf Giant Double Nasturtiums

Plants are of compact, bush or globular form, about 1 ft. high and 1½ ft. across. The gorgeous, giant double and semi-double sweet-scented flowers are produced most freely on very long stems, which makes them especially fine for cutting. The irregularly placed petals give the blooms an unusually artistic appearance. The dwarf, rounded plants covered with flowers are most attractive in beds, borders, edgings, rock gardens and pots. Uniform habit of growth.

2338 Cherry Rose An exquisite shade of soft cherry-rose. Flowers grow 2½ to 3 in. across and are produced earlier and more profusely than any other variety. Wonderful for cutting; very showy in the garden.

2306 Delightful Soft salmon-cerise, the upper petals oddly marked crimson-maroon at base. Flowers become deeper salmon-cerise with age.

2336 Garnet Gem Deep, rich, very bright garnet-red. The delightfully sweet-scented flowers have enough orange suffusion to enliven them with an iridescent glow that is most pleasing.

2329 Golden Globe Exquisite, giant double and semi-double, pure golden yellow blooms cover the dwarf globe shaped plants.

2346 Mahogany Gem The darkest colored nasturtium we have ever seen; flowers are of a rich velvety deep but brilliant mahogany.

2305 Orange Glory The large, sweet-scented flowers are bright orange, with wonderfully fluted and crinkled petals; base of each of the upper ones and inside of throat distinctly painted deep garnet-brown.

2348 Primrose Gem Giant double, sweet-scented, soft primrose colored flowers are freely produced throughout the entire season.

2327 Scarlet Globe Showy, giant double and semi-double, sweet-scented, fiery scarlet blooms are borne in the greatest profusion.

Any of the above: Pkt. 15¢; oz. 50¢; ¼ lb. \$1.50

Early Flowering SWEET PEAS

Burpee's Early Flowering Sweet Peas come into bloom outdoors before the summer heat arrives—usually 3 to 4 weeks earlier than the Burpee Giant varieties. They are valuable for winter flowering under glass, also especially adapted for growing in frost-free sections and for earliest blooms outdoors in the North. Sweet Peas do best in cool weather. If seed was not sown in the fall, sow as early in the spring as the ground can be prepared. They prefer an open, sunny location, and deep, rich soil which must be well drained.

Burpee's Giant Ruffled SWEET PEAS

ORIGINATED ON BURPEE'S FLORADALE FARMS

Giant Ruffled Sweet Peas are Burpee introductions, developed on Burpee's Floradale Seed Farms in California. They are distinguished by the unusual duplexness and extra frilliness of the flowers. This gives a double appearance to the large, waved and ruffled flowers which makes them so distinct and so attractive.

SPRING FLOWERING SWEET PEAS

Come into bloom, outdoors, between the Early and Giant classes. Plants are quite vigorous and what the flowers lack in size is made up by the heavy crop of blooms produced. Vines seem more heat resistant than other sweet peas. Under glass they are unusually free flowering and prolong the spring cutting season. We offer three distinct and desirable colors, each of which received an award in the All-America Selections.

Burpee's Beautiful ASTERS

A continuous display of asters from early summer until frost can be had by planting early, midseason, and late blooming varieties. If you plant some very early varieties, we suggest that you have seedlings of other flowers coming along to take the place of the earliest when they are through blooming, thus keeping all your ground occupied during the entire season.

Asters are easy to grow. They prefer rich, well-drained soil, plenty of sunshine, and ample moisture. They begin to bloom in 14 weeks to four months after seed is sown, varying according to type and climate. For earliest blooms, sow seed indoors in boxes or seedpans six weeks before your usual outdoor planting time. Set plants in the garden when weather gets warm.

*** Varieties marked with an asterisk (*) are the Wilt-Resistant Strain. They are highly immune to "Wilt disease" or "Stem-rot."**

Burpee's Extra Early Asters

These very early flowering varieties begin to bloom in about 14 weeks after seed is sown—long before most other asters begin to bud. Extreme earliness and good cutting stems make them a most welcome type of aster for the home gardener and the florist. All created by Burpee.

1605 Early Bird First flowers appear very early and the plants will continue to produce their colorful carmine-rose flowers for several weeks. As flowers age, the outer petals become attractively tipped lighter rose. Blooms are double, $3\frac{1}{2}$ in. across, with the petals evenly placed to form a most symmetrical flower. Plants grow 15 in. and more high.
Pkt. 25¢; $\frac{1}{8}$ oz. 75¢; $\frac{1}{4}$ oz. \$1.25

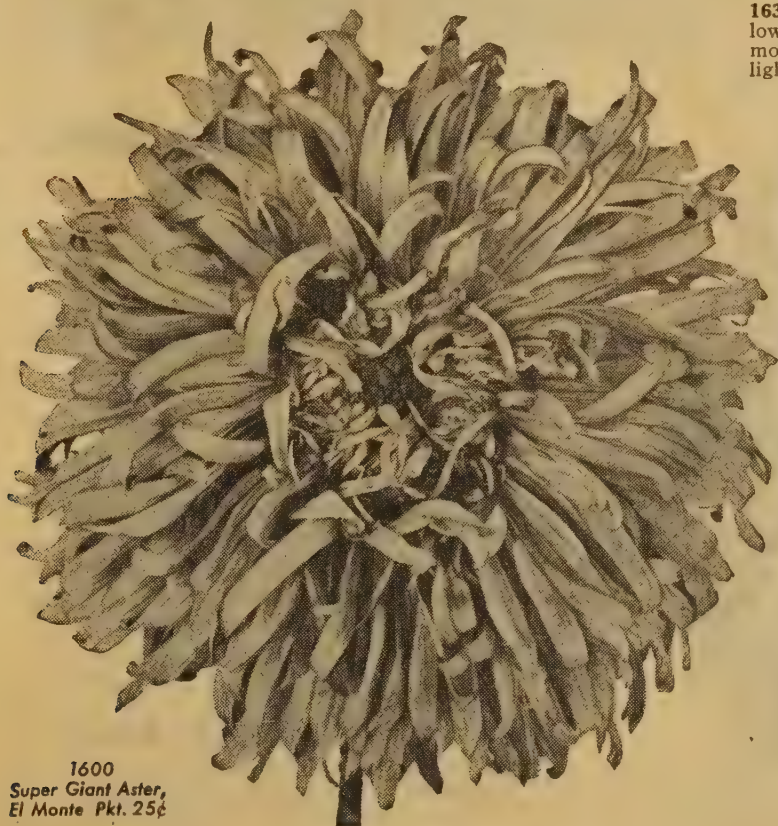

1603 Navy Blue Giant flowered aster; rather close in form to that of the Giant Crego type. The flowers are large, about 4 in. in diameter, with long ribbon-like, beautifully curled, twisted and interlaced petals of a rich, luminous, deep velvety purple-blue color. Plants grow about 20 in. tall. Stems are 12 in. and more in length; wonderful for cutting.
Pkt. 25¢; $\frac{1}{8}$ oz. 75¢; $\frac{1}{4}$ oz. \$1.25

3087 Violet Glory Deep purple-violet, flowers, 3 to $3\frac{1}{2}$ in. across with the center incurving petals displaying a silvery sheen. Plants are of open, spreading habit, $1\frac{1}{2}$ ft. tall and about 2 ft. across; not very leafy, seeming to give all their strength to the flowers, which are freely borne on stems ranging in length from 12 to 15 in. Last long when cut.

Double Large Flowered Stocks

Heavy spikes of handsome, fragrant flowers, like small rosettes, are produced in a wide range of soft and distinct shades. Fine for bedding, borders and cutting. For best results, sow seed indoors in shallow boxes or seed-pans 6 to 8 weeks before your usual outdoor planting time. Keep in a temperature of 65° F. or less from the time the seed is sown until the plants have made 8 leaves so that they will form buds. When plants are large enough to handle, pot them up singly and grow on in pots until weather and soil have become warm, when they should be transplanted to the garden where they are to remain.

BURPEE'S Perennial Flower Seeds

Perennial Flowers are the hardy permanent ones that live for years. Plants grow to the flowering stage each year and die down again to the roots, which remain alive but dormant until the next season. Some perennials will flower the first year from seed if it is sown early, although two seasons are usually required before the plants produce their blooms.

Perennials are most important flowers in the garden. With proper selection they can be had in bloom from early in the spring until late in the fall, beginning with the showy golden yellow Alyssum saxatile compactum, Siberian Wallflower, Columbine, and others, ending the season with the fall Chrysanthemums. Cultural directions are given on every bag. With the perennials we have included the best of the biennials, seed of which is sown one year, the plants blooming the second season, after which they die.

Average heights and blooming season are given in the descriptions. Some variation is natural in different localities.

Plants last for years with little care or attention; for the most flowers, however, it is advisable to lift plants and divide every second year.

BURPEE'S Famous Vegetable Seeds

For extra yield and more food per sq. ft. of garden space, plant hybrids wherever they are available; they, too, are usually of better quality than standard varieties. Be sure to grow Burpee Surecross yellow hybrid sweet corn, page 73; Burpee Snowcross white hybrid sweet corn, page 74; Burpee Hybrid Cucumber, page 77; Burpee Hybrid Eggplant, page 80; Yankee Hybrid Squash, page 100 and the Burpee Hybrid Tomatoes, pages 104 and 105. Give them a trial and note the results.

Hybrids are strong, vigorous growers and outyield regular varieties, the extra quantities coming, in large measure, from the soil. To produce more, these plants should be fed more. Extra applications of manure or fertilizers will enrich the soil and help you get maximum results.

Do not be satisfied with one crop of vegetables from seed sown in the spring. Keep your garden working three seasons out of four and in mild climates it is possible to make plantings so that crops may be harvested every month. Be sure to can, freeze, dry and store as much food as possible for use during the winter. Keep all ground occupied. When an early crop is harvested, follow it by another. Plant a leaf crop after a root crop and vice-versa. Before doing so, prepare the soil well, add fertilizer, working it lightly into the soil. "How to Grow" directions are printed on every bag of Burpee Seeds.

All Burpee Vegetable Seeds are Postpaid anywhere in U. S.

Maturity Dates

The average number of days required from the time the seed is sown until vegetables are ready for use is given with each variety. Where plants must first be grown, such as Celery, Cabbage, Peppers, Tomatoes, etc., the number of days to maturity is from the time plants are set in the garden. Of course, the time is average, having been obtained over a period of years in our trial grounds under different conditions; some variation is to be expected, depending on the season, locality and time of sowing. The approximate maturity dates given will show the relative time when different varieties will be ready to use.

◎ Follow the Bull's Eye ◎

We have used this mark, ◎, for years to guide the gardener in the selection of vegetable varieties which we believe will give the best results under varied conditions of soil and climate. This mark, ◎, usually called a bull's eye, was used by the ancient alchemists to represent gold. It therefore is most appropriate for indicating the varieties which we consider the best of their class. If you are not thoroughly posted which varieties to choose as the most suitable for your particular section, we suggest that you make your selection from those marked with the bull's eye. They have been found most satisfactory throughout the country.

EDIBLE SOY BEANS

Plants are extremely productive, vigorous, upright growing, 2 ft. and more high. Do not require support. Beans are delicious, either cooked as green shelled beans or as dried shell beans and served similarly to lima beans; also suitable for freezing. High in proteins and vitamins. Pods are not edible. A pkt. will plant 25 ft. of row; 1 lb. 150 ft.

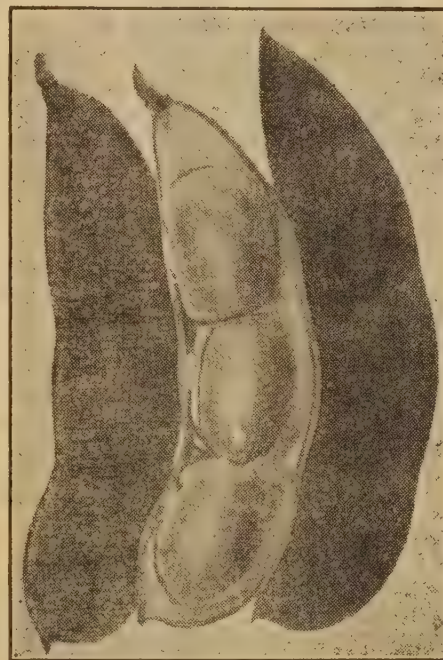

35 Bansei 96 days. One of the most productive; it will produce crops in nearly any section of the country. The plants are erect, bush-like and literally loaded with pods, each containing 2 or 3 oval-shaped, bright green beans which turn yellow when mature. Pkt. 10¢; ½ lb. 30¢; 1 lb. 50¢; 2 lbs. 90¢; 5 lbs. \$2.10

37 Funk Delicious 105 days. Pods contain two and sometimes three beans, as large as baby limas in the green shell stage; pale green as they come from the pod and a beautiful bright green when cooked. Dry seed is large, round and straw-yellow in color. Heavy yielding, vigorous plants. Pkt. 10¢; ½ lb. 30¢; 1 lb. 50¢; 2 lbs. 95¢; 5 lbs. \$2.25

GIANT BUTTER or FAVA BEANS

Mammoth pods with 5 to 7 lima-like beans

24 Long Pod 85 days. Giant Butter or Fava are the well known Broad Beans, much harder than other beans and should be planted as early in the spring as the ground can be worked; they will not thrive in summer heat. Plants are large and erect, true bush form, and heavy yielders. Pods are glossy green, 7 in. long, and contain 5 to 7 large, oblong-shaped, flat, light green beans, which are valuable for use as green shell beans. The pods are not edible; the large beans somewhat resemble lima beans and should be used in the same way, either cooked fresh or as a winter shell bean. Flavor is somewhat like that of the pea. Becoming very popular, especially in large city hotels and restaurants. Dry seed is large, circular, flat, reddish brown with black eye. Try a planting this year; plant early. One pkt. will plant 15 ft. of row; 1 lb. 75 ft. of row. Pkt. 15¢; ½ lb. 35¢; 1 lb. 60¢; 2 lbs. \$1.15; 5 lbs. \$2.75

Bansei Edible Soy Beans

BUSH SHELL BEANS — may be used either green or dried

Grown mostly as dried beans for winter use; the pods of Dwarf and French Horticultural may be used, when young, as snap beans. The culture is similar to that recommended for bush beans on page 58, but shell beans should be left on the plants until the pods are matured. The bushes are then cut, allowed to dry, and the beans threshed and thoroughly dried out before they are put away for later use. A pkt. will sow about 25 ft. of row; one lb. 150 ft. of row. Many varieties of pole beans, listed on page 61, are also desirable as shell beans.

30 Michilite Pea Bean 90 days. Similar to Improved White Navy but more uniform, productive, and of better quality. The small white beans are used for baking, boiling and soup or dried for winter. Pkt. 10¢; ½ lb. 25¢; 1 lb. 45¢; 2 lbs. 80¢; 5 lbs. \$1.85

28 Red Kidney 95 days. Pods are 6 in. long, flat, light green; beans are large, kidney-shaped, pinkish red to mahogany in color, and are in great demand, baked, boiled, in soups and certain Spanish and Mexican dishes. They have a rich flavor, entirely different from white shell beans and are preferred by many persons. Plants are large and very prolific. Pkt. 10¢; ½ lb. 35¢; 1 lb. 60¢; 2 lbs. \$1.15; 5 lbs. \$2.75

56 Great Northern 90 days. Pods are 3 to 4 in. long, oval, dark green, prolific. The white dry beans are excellent for boiling, baking and soup. Pkt. 10¢; ½ lb. 25¢; 1 lb. 45¢; 2 lbs. 80¢; 5 lbs. \$1.80

29 White Marrowfat 100 days. Pods 4½ to 5 in. long, flat, nearly straight, and well filled with 5 and sometimes 6 large white beans valued for baking. Pkt. 10¢; ½ lb. 30¢; 1 lb. 50¢; 2 lbs. 95¢; 5 lbs. \$2.20

Stringless Green-Pod BUSH BEANS

*Burpee's
Tender Pod
Bush Bean*

Before the introduction of stringless bush beans, green and yellow podded varieties were known as string beans and this name, unfortunately, seems to remain in many localities. Now that strings and tough fiber have been bred out of these varieties, we are referring to them as snap beans. Take a pod, green or yellow, break it quickly and see how it snaps. Pods are most delicious, raw or cooked, if picked when quite young and tender. They have more vitamins than, are better for you, and, they taste better.

47 Burpee's Tender Pod ☉

48 days. The best and most delicate flavored as well as the most tender of all green snap beans. Pods are brittle, fleshy, succulent, stringless, $4\frac{1}{2}$ to 5 in. long, thick, round in cross section, smooth, deep dark green in color, curving slightly, with long and distinctively curved tips. Of great value for the home garden; wonderful for canning and freezing; matures early and is productive over a long period. Seeds are pearly white, with a small red spot on either side of the eye; if allowed to ripen are suitable for use as dried shell beans. It is, however, principally grown for its pods of fine texture and highest quality. All-America Winner.

27 Tendergreen ☉—Round

Pods mature early and are borne profusely for a long time. Wonderful for home and market; ideal for canning, freezing and shipping. Each year has seen the use of Tendergreen on the increase and with good reason—pods are long, plump, with excellent color and good flavor. A bean you should grow.

In addition to being desirable for table use, it is also excellent for canning and quick freezing. The "beaniest" tasting of all bush beans. All-America Winner.

How to Grow BUSH SNAP BEANS

Plant seed when danger of frost is past and the soil is quite warm, in rows 18 to 30 in. apart for hand cultivation or $2\frac{1}{2}$ to 3 ft. apart for field cultivation. Make furrows about 2 in. deep and space the beans 2 to 3 in. apart in the row. Cover with fine soil and firm the soil over the seed with your foot or the back of a rake to insure good germination. When plants are 2 or 3 in. high, thin to stand 4 to 6 in. apart in the row. For a continuous supply of tender pods, make additional sowings when the preceding planting is up and growing; allow plenty of time for the last sowing to bear before frost. Plants grow 15 to 20 in. tall and will bear more pods if you pick them when young. A pkt. of seed will sow about 25 ft. of row; one lb., 150 ft.

Burpee's POLE BEANS

Pole beans come into bearing later than bush beans, produce more heavily over a longer period and some produce bigger pods. Support must be given the vines which grow 5 to 8 ft. and more high. Young pods make delicious snap-shorts; also popular as green

or dried shell beans. To many persons, pole beans have that good bean flavor that is lacking in some varieties of the bush type. The most popular and dependable varieties are Kentucky Wonder, McCaslan (green-pods) and Golden Cluster Wax (yellow-pod).

72 Kentucky Wonder or Old Homestead ☉

65 days. Most popular and dependable throughout the country. It is early, climbs well, and bears a heavy crop of large, green, curved pods, 7 to 9 in. long, in clusters. Pods are round, thick, meaty, tender, brittle, excellent for freezing, and, when young, are free from string or fiber although small strings develop later. These strings do not impair the quality of the pods so that they can be eaten until late in the season. Though thick, the pods appear slender on account of their length. The light brown seeds have a tasty flavor which makes them so desirable for use as shell beans. A profitable market bean in many sections.

How to Grow POLE BEANS

Pole Beans are less hardy than bush varieties, so should not be planted until all danger of frost is past and the soil is warm and moderately dry. They do best if the vines are given support, the most frequently used being rough poles, spaced 3 to 4 ft. apart each way. Place 5 to 8 beans around each pole, cover with 2 in. of soil, and firm to assist germination. When plants are well started, thin so that 3 or 4 of the strongest remain to a pole. A packet of seed is enough for 15 poles; 1 lb. of seed for 100 poles. Pole Beans may also be planted along a trellis or fence, sowing 300 ft. of row with 1 lb. of seed.

Bush LIMA BEANS

Easier grown than pole limas and the yield per sq. ft. of garden space is about the same for each or in some localities and seasons may be in favor of the pole varieties. Varied size and shape of beans to meet your preference, whether it be the large thick (Burpee's Fordhook) or small thick "potato" type (Baby Fordhook), the large flat (Burpee's Improved) or the small flat baby butter limas (Thorogreen). Some prefer one type for eating fresh, another as dry beans or quick freezing. We list the best varieties for the different purposes. For eating fresh, pick pods as soon as the beans have reached edible size.

65 Burpee's Fordhook ☉—Most popular bush lima

75 days. The leading variety of bush lima beans for home garden, freezing or commercial use. Pods are 4 to 5 in. long, 1 to 1½ in. wide, and ¾ in. thick, dark green, straight to slightly curved, crowded with 3 or 4 large, thick beans whose dry, mealy quality and delicious flavor, not unlike chestnuts, are familiar to everyone who uses lima beans. Seeds hold their green color until quite old; cream colored when ripe.

Plants are bushy, upright, with large leaves of heavy texture, 20 in. or more in height, with a spread of 2 ft. or more, very vigorous, with many pod-bearing lateral branches. Bearing season is long and a planting may be picked for a month or more.

Fine quality, large pods, and always salable, attractive appearance, made Fordhook the universally known large "potato" type bush lima bean for all purposes. Introduced by Burpee and named for Burpee's famous Fordhook Farms. Buy from the originator.

It was designed especially for canning and freezing; home gardeners, too, will appreciate its surprisingly heavy crop of pods. Plant is truly bush, about 14 in. tall. Pods are 2¾ in. long and ¾ in. wide, thick, slightly curved, containing 3 or 4 beans, close but not crowded. Seed is green turning cream when dry.

How to Grow BUSH LIMA BEANS

Bush Lima Beans succeed well in almost any good garden soil but do best in a rich, well-drained, sandy loam. As seed is sensitive to cold and wet ground, it must not be planted until the soil has become quite warm and fairly dry. Plant the seeds edgewise, eye down, 5 in. apart in rows 2½ to 3 ft. apart, and cover with 2 in. of fine soil. When the plants are well started, thin to stand 12 to 15 in. apart for large-seeded varieties and 9 to 12 in. for small-seeded varieties. Give frequent and shallow cultivation until blossoms appear, but do not cultivate or handle plants when they are wet. A pkt. of large-seeded varieties will sow 15 ft. of row; one lb. 100 ft.; the small-seeded kinds will, of course, go much farther.

Pole LIMA BEANS

Pole Lima Beans mature somewhat later than bush limas and must be given support on which the vines may climb. The yield per sq. ft. of garden space is about the same as that for bush limas or slightly larger. Some persons prefer the flavor of pole limas to the bush varieties, some like the thick-seeded or "potato" type (Burpee's Best), others the flat-seeded (Burpee's Giant Podded), some choose the large seeded, others the small; all are good—it's a matter of individual choice and for what purpose intended—to be eaten green, dried, canned or quickly frozen.

106 Burpee's Giant Podded ☉—*Fine quality*

90 days. The largest podded and largest beans of all pole limas. Pods are truly enormous, 7 to 8 in. long, 1½ to 2 in. wide, with 5 and sometimes 6 extra large, oval-flat, green beans of the most delicious flavor; excellent for freezing. Vines are vigorous growing; attain a height of 10 to 12 ft. and freely produce their pods in clusters of 4 to 8 from the bottom to the top of the poles. Pickings may be made continuously from midsummer until vines are killed by frost. We can recommend it highly for home gardens; also readily salable on local markets and roadside stands.

103 Carolina or Sieva—*Well-known "Butter Bean" of the South*

78 days. Pods grow 3½ in. long, and contain 3 or 4 small, flat, green beans of splendid quality. Quick to bear, so are especially valuable in sections with short summers, where large-seeded varieties are too late to produce well and in localities with hot, dry summers where pods often fail to set.

105 Burpee's Best ☉—*Thick-seeded*

92 days. The Fordhook among the pole limas. You know Fordhook Bush? Then just imagine a pole bean with all the good characteristics of Fordhook—its thick seed, its rich tenderness, straight, smooth pod, not only larger pods but three or four times as many on each of the vigorous plants which are strong growing climbers attaining 10 to 12 ft. under average conditions. They produce pods in clusters of 4 to 8 along their entire height. Pods are straight, 5 to 6 in. long, 1½ in. broad, and nearly one inch through, well filled with 4 or 5 and sometimes 6 big, thick, plump beans that are exceptionally tender and have the distinctive, pleasing nutty flavor of the bush Fordhook.

Burpee's Best represents a marked improvement over any pole lima of the thick-seeded or "potato" type for home and market. It is excellent for freezing and has remarkable long-distance shipping qualities.

How to Grow POLE LIMA BEANS

Pole Lima Beans are easily grown in any rich, well-drained garden soil. Should be given support, the most frequently used being rough poles, spaced 3 to 4 ft. apart each way. Sow seeds when soil has become warm; put 6 to 8 seeds (preferably with the eyes down) around each pole, cover with 2 in. of fine soil, and firm to assist germination. When plants are well started, thin so that 3 or 4 of the strongest remain to a pole. A pkt. will plant 10 poles; 1 lb. for 50 poles. Small plantings may be made along a fence or trellis, putting several beans 1 ft. apart, later thinning to one strong plant; such plantings would require 1 lb. of seed to about 50 ft. of row.

Burpee's RED BEETS

Beets are easily grown and may be enjoyed as baby beets when roots are half grown, or they may be used from then on until they reach their full size. The tops are highly palatable when cooked alone as "greens" or young beets with their tops may be cooked

together. Burpee's Red Ball, Detroit Dark Red and Crosby's Egyptian are universally popular. Spinach Beet (Swiss Chard) is grown extensively for the use of its tops as "greens" and its mid-ribs as asparagus; we offer the best varieties on page 102.

*Detroit Dark Red Beets
Short Top and Medium Top*

115a Detroit Dark Red, Short Top ☉

60 days. One of the best round beets for main-crop and fall use whether for table, canning or freezing. Tops average about 3 in. shorter than those of the regular strain, making it suitable for growing on muck or for any use where large tops are not necessary or desirable. Roots are also slightly smaller and more globular. Skin is dark red; flesh is uniform deep red with the zones so inconspicuous that the flesh, when cooked, seems to be one solid ball of deep blood-red, sweet and tender. Smaller tops allow beets to stand closer together in the row.

Though it is a quick grower, the roots will keep a long time in storage. Splendid for the home garden and for market gardeners. Flesh is fine grained, tender and most agreeably sweet. *Crosby's Egyptian
Beets*

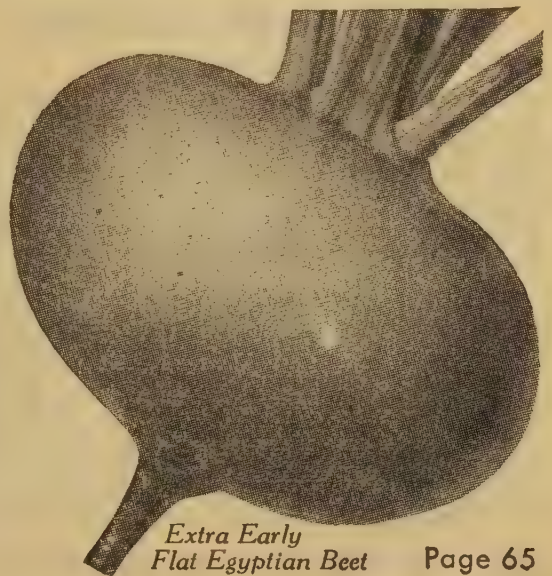

How to Grow BEETS

Sow seeds as early in the spring as the ground can be worked. For a continuous supply make additional sowings when the preceding planting is up and growing; allow plenty of time for the last sowing to mature before frost. Sow seed in rows 1½ to 2 ft. apart and cover with ½ in. of fine soil. A rich, sandy loam, mellow and deep, produces the best shaped and smoothest roots. Thin plants to stand 3 to 4 in. apart in the row. The later sowings will produce the best beets for winter storing. Dig the roots with the approach of cold weather and keep in a cool cellar, packing them in slightly moist earth until ready to use throughout the winter months. A pkt. of seed will sow 25 ft. of row; one oz. 100 ft.

109 Extra Early Flat Egyptian

Burpee's Earliest CABBAGE

*Burpee's
Copenhagen
Market*

192 Burpee's Copenhagen Market ☉

72 days. An outstanding strain of the variety which is notable for its uniformity from year to year as well as in a single year's planting. This uniformity makes it valuable to home gardeners and to market growers who supply a critical trade. Extreme earliness is another quality of this cabbage which has found favor with our customers all over the world. Produces well-rounded, solid heads of excellent quality, 6½ in. in diameter and 6 in. deep, weighing from 4 to 4½ lbs. Plants are small and quite compact with few outer leaves, which permits close planting. Heavy yield, convenient size, attractive shape, solidity and fine quality combine to make Copenhagen Market the popular early cabbage it is today. The flavor is remarkably fine so that it is also desirable for early kraut making. Reliable and uniform. First introduced in America by Burpee.

Pkt. 10¢; ½ oz. 30¢; oz. 55¢; ¼ lb. \$1.65

Cabbage is easily grown and may be eaten raw as cole slaw or cooked in different ways. While the smooth leaved varieties are the most popular, some prefer the green savoy crumpled leaved (Perfection Drumhead); others, the deep purplish-red (Mammoth Red Rock); some the round heads (Copenhagen Market); others, the pointed (Early Jersey Wakefield) or flat (Premium Flat Dutch). We have the best kinds to meet your choice. Some of the midseason and late varieties make excellent kraut; all the late varieties are highly desirable for fall use and winter storing. Chinese or Celery Cabbage may be served like lettuce, cole slaw or cooked like regular cabbage.

175 Golden Acre ☉—Round heads

63 days. Has all the wonderful characteristics of our Copenhagen Market, but the heads are a trifle smaller and mature 9 days earlier. 190 Wisconsin All Seasons ◎ (Yellows-Resistant)

84 days. Bred from All Seasons and has inherited all the good qualities of that excellent cabbage. It is the hardiest of all flathead varieties and is much in demand for making kraut. Heads are hard and solid. Stands hot weather unusually well. Recommended for "yellows"-infested land as it is highly resistant to "yellows" as well as cabbage mosaic. On soils not infested with yellows, plant non-resistant All Seasons or other non-resistant varieties.

Pkt. 15¢; ½ oz. 40¢; oz. 75¢; ¼ lb. \$2.25

YELLOWS-RESISTANT CABBAGE

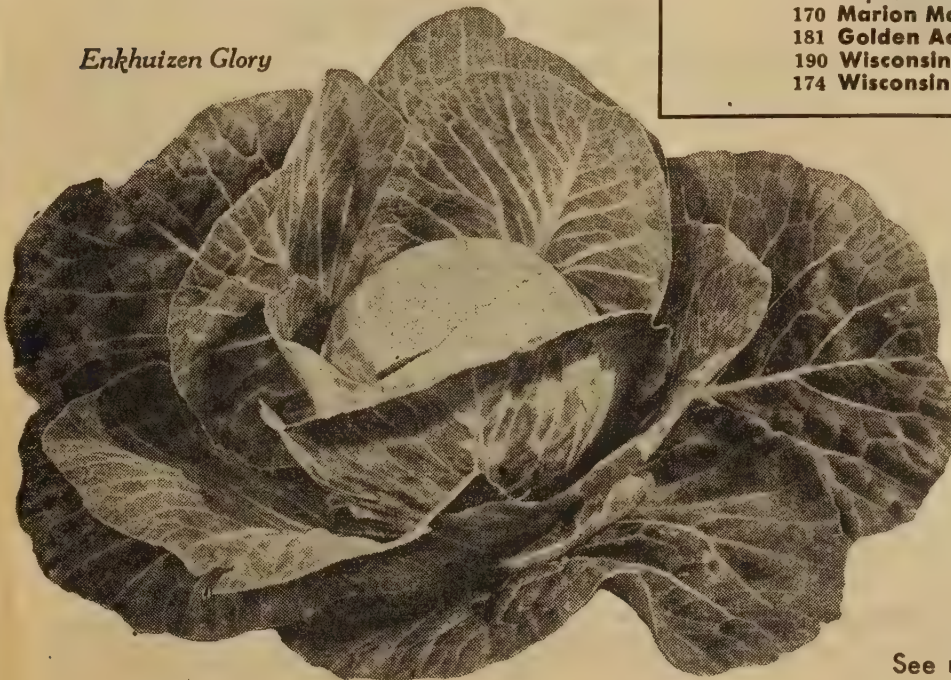

Yellows-resistant strains were introduced by the Wisconsin Agricultural Experiment Station so that cabbages could be grown in localities where infested "cabbage-yellows" soil had prevented non-resistant varieties from producing a crop. If you live in such a locality and have had trouble, try the following highly "yellows"-resistant varieties:

- 191 Early Jersey Wakefield See page 66.
- 172 Improved Allhead Select See page 66.
- 170 Marion Market See page 66.
- 181 Golden Acre See page 66.
- 190 Wisconsin All Seasons See this page.
- 174 Wisconsin Hollander See page 68.

How to Grow CABBAGE

For earliest crop, start early and mid-season cabbage seed in hotbed or house; for medium early cabbage, seed may be sown in a coldframe or open-ground seed-bed in early spring. Sow late cabbage for winter use in a seed-bed outdoors when soil has become thoroughly warm. A pkt. will produce about 250 plants; an oz. about 2000 plants. Days to maturity are figured from the time the plants are set in the garden; allow 30 days to produce plants from seed. Cabbage does best in deep, rich, loamy soil and should be given plenty of water during prolonged dry spells. Space early cabbage plants 18 in. apart in rows 2½ ft. apart; the large mid-season and late varieties 2 ft. apart in rows 2½ to 3 ft. apart. Cabbage should never be planted in the same location where it, cauliflower, broccoli, or any of the cabbage family had been planted the previous year. Healthy, solid heads of late cabbage may be stored for winter use.

See next page for Late Cabbage . . 67

CHINESE or CELERY CABBAGE

Not a true cabbage; resembles Cos Lettuce somewhat. May be served like lettuce, or, when shredded, makes a delicious cole slaw. Boiled, it is far more palatable than ordinary cabbage. Adapted to quick freezing. Where summers are cool, seed may be sown in early spring, otherwise sowings should be made about 3 months before your first expected frost. If sown too early, plants will "bolt" during hot weather and not form heads. Packet will sow 25 ft. of row, an oz. 200 ft.

214 Chihli 73 days. An early, elongated heading Chinese Cabbage, growing 18 to 20 in. tall and about 3½ to 4 in. thick. The firm, well-blanching, white heads taper near the top. Leaves are very crisp and tender; broad, smooth and fringed at the edges. Extensively grown for market and roadside sales because the large, attractive heads sell readily; it is the most popular for the home garden where the longest head is wanted.

Pkt. 10¢; ½ oz. 30¢; oz. 50¢; ¼ lb. \$1.50

Burpee's CAULIFLOWER

Heads should be used as soon as they fill out, otherwise they will lose in quality and break. Uncooked cauliflower is delicious, when head is broken up into small pieces, chilled, and used as a relish with mayonnaise. Cooked cauliflower is a delectable dish; nice too when

used with cucumbers, onions, peppers, etc., in mustard chow-chow. Burpee's cauliflower seed is produced under ideal climatic conditions on our Floradale Farms and is the equal of that grown anywhere in the world. We offer the best six varieties.

253 Burpeeana 78 days. Exceptionally choice extra early strain of Super Snowball as offered by Burpee. It stands out as the most valuable cauliflower for the home as well as the market gardener; excellent for freezing. Beautiful, well-rounded, compact, pure white heads protected by many long jacket leaves. Adapted to shipping. Pkt. 30¢; 1/4 oz. \$1.60; 1/2 oz. \$3.00; oz. \$5.75

251 Early Snowball—A

60 days. Plants small to medium in size, erect to semi-spreading, with large, wavy, medium green leaves. Heads are very firm, deep globular in shape, white in color, and of excellent quality. Because heads can be cut in a relatively short time, it is widely used.

252 Improved Holland Erfurt

85 days. An especially fine strain of this important variety; very popular in leading cauliflower sections. Plants are fairly short stemmed, really uniform in maturity; heads are flat, hard, compact and definitely of the true Erfurt type. Suitable for freezing.

Pkt. 25¢; 1/4 oz. \$1.50; 1/2 oz. \$2.75; oz. \$5.25

245 Burpee's Dry Weather

95 days. Though cauliflower does best in a cool and moist season, we have in Dry Weather a variety which is actually drought-resistant and will produce heads when other varieties are a complete failure due to lack of moisture. In addition to this most valuable feature, it is a cauliflower of the highest quality, producing large, pure white heads that weigh 2 to 3 lbs. each. If you have been unsuccessful in getting cauliflower to head, try Dry Weather.

Pkt. 25¢; 1/4 oz. \$1.00; 1/2 oz. \$1.90; oz. \$3.70

258 Veitch's Autumn Giant

130 days. The finest late cauliflower; immense, compact white heads, 8 to 10 in. across. Like all late varieties, it is recommended for fall crop only and in regions where cauliflower is sure to thrive.

250 Improved Super Snowball

82 days. In sections where the Snowball type of cauliflower is preferred, or matures to best advantage, growers should try this strain. Plants are uniform and set a crop of pure white, smooth heads which are noted for their tight curds. Desirable for freezing.

Pkt. 30¢; 1/4 oz. \$1.60; 1/2 oz. \$3.00; oz. \$5.75

How to Grow CAULIFLOWER

Cauliflower is best grown as a fall crop in the greater part of the United States, although in regions where summers are reasonably cool, sowings may be made indoors or under glass, 30 to 40 days before it is time to set plants in the garden. For a main or fall crop, sow the seed in a specially prepared seed bed or coldframe about 4 months before your first expected frost. When plants are ready to be set in the garden, space them 1 1/2 to 2 ft. apart, in rows 2 1/2 to 3 ft. apart. A packet of seed will produce about 150 plants; 1 oz. 4000 plants. Days to maturity given in descriptions are from the time the plants are set out in the garden.

WINTER CAULIFLOWER

155 St. Valentine Broccoli 150 days. Large, solid, white heads identical to cauliflower. Too late maturing for general Eastern culture. Recommended as a winter crop, especially in the Pacific Coast area, where season is long and weather is cool.

Burpee's CARROTS

May be used at different stages of growth but are at their best if eaten when half grown or smaller. There are varied sizes and shapes to suit your purposes as well as soil conditions; Burpee's Oxheart with its stocky, heart-shaped roots especially suited for shallow or heavy soils to Burpee's Improved Long Orange for deep mellow soils—the popular medium length carrot for general purposes is Burpee's Goldinhardt. There are many ways to use carrots—cook alone, use in soups, stews, chowders with other vegetables or cook with roasts. Raw carrots may be served as a relish when chilled and cut lengthwise in slender strips; splendid when shredded and used in salads and a refreshing appetizer when served as chilled juice.

Nantes Half Long Carrots—practically coreless

223 Burpee's Oxheart Carrot

75 days. Splendid midseason carrot, which may be used while the roots are still small. If allowed to mature, the broad, stocky, heart-shaped carrots will measure 5 to 5½ in. long and 3 to 3½ in. across where they are thickest; this gives a large amount of edible flesh, which is light orange, tender, sweet, and of delicious flavor. Because of their shape, they are easy to harvest and do well in shallow or heavy soils where longer carrots often fail to make attractive roots. Fine for home use and busheling rather than bunching. It is a good cropper and keeper.

Pkt. 10¢; ½ oz. 25¢; oz. 45¢; ¼ lb. \$1.25

232 Tendersweet ☉—All its name implies

75 days. A long, bunching type which requires a deep soil for best development. When fully mature the roots measure 1½ to 2 in. at the shoulder and 8 to 10 in. long, and taper to a blunt end. The skin is colored rich orange-red and the interior is a deep orange with indistinct core. The quality is excellent and the texture crisp and brittle. The foliage is distinct, as the leaf stalks are tinged purple. Excellent for home, market and storing.

Pkt. 15¢; ½ oz. 30¢; oz. 55¢; ¼ lb. \$1.65

225 Danvers Half Long—Favorite for home and market

75 days. Well-known, heavy cropping carrot of great uniformity. The deep orange-red roots are 7 to 7½ in. long and 2 to 2½ in. in diameter, tapering gradually toward the blunt end. The flesh is bright orange, fine grained, tender, rich in flavor, and very sweet. Popular for freezing, home garden and for market; valuable for winter storing, feeding stock and none better for table use. Has proved to be widely adaptable in all soils.

Pkt. 10¢; ½ oz. 25¢; oz. 45¢; ¼ lb. \$1.25

240 Large Yellow Belgian—For stock feeding

100 days. Very productive carrot with roots measuring 18 in. long, broad at the shoulder, and gradually taper to a fine point. The skin below the ground is a light orange-yellow, but above the soil surface it is green. Will yield heavily, especially in deep, mellow soil. Of high value for feeding cows, horses and sheep during the fall and winter. Easy to harvest as the large size roots grow partially above the surface of the soil as they become fully developed. Good keepers of fine quality. Not suitable for table use.

Pkt. 10¢; ½ oz. 20¢; oz. 35¢; ¼ lb. \$1.05

How to Grow CARROTS

Sow seed thinly in early spring in rows not less than 12 in. apart and make additional sowings when the preceding planting is up and growing; allow plenty of time for the last sowing to mature before frost. Cover the seed with ½ in. of fine soil. Thin the small early varieties to stand 2 in. apart in the row and the larger, later varieties from 3 to 4 in. A rich, mellow, deeply worked soil gives the finest carrots. The later sowings will produce nice, tender carrots in the fall; these are the best for winter storing. A pkt. will sow about 30 ft. of row; an oz. about 200 ft.

Burpee's CELERY

A most popular vegetable served raw as a relish or cooked in different ways. May be used from the time plants are one-half or two-thirds grown until fully matured. Stalks may be blanched to make them more crisp and tender, although many persons prefer them unblanched, especially Burpee's Fordhook, Giant Pascal, and Utah, all famous green celeries. Some varieties, such as Burpee's Fordhook, are highly desirable for winter storage either where grown and protected from freezing or lifted and put in soil in a cold cellar.

272 Burpee's Fordhook ☉

130 days. Burpee's Fordhook Celery is, without question, the best fall and winter variety in existence. Plants are stocky and compact, growing 15 to 18 in. tall. Although comparatively dwarf, they are so solid that they weigh fully 2 lbs. each. Their limited height is of great importance, since the plants are by far more easily blanched than those of the taller varieties. The stalks, after blanching, are a beautiful pure silvery white with a large, tightly folded full heart of the most delicious flavor. Always tender, crisp, without strings, and juicy. The time of maturity and the dark green color before blanching make Fordhook an ideal variety for winter storage. We offer our improved strain.

Pkt. 25¢; ½ oz. 85¢; oz. \$1.60; ¼ lb. \$4.75

260 Burpee's Golden Self-Blanching ☉—Early

115 days. First introduced in America by Burpee. This is the American-grown seed produced from the dwarf French-grown stock. Grown extensively by home gardeners as well as by market growers. The plants make a compact, dwarf growth and form thick, solid, heavily ribbed stalks which blanch easily into a beautiful clear waxen yellow color. The stalks and heart are crisp, solid, heavy, free from any strings and of the most delicious flavor.

Pkt. 20¢; ½ oz. 75¢; oz. \$1.35; ¼ lb. \$4.25

263 Cornell 19 ☉—Outstanding early, self-blanching

120 days. Early, vigorous, self-blanching, and resistant to fusarium yellows. Plant 20 to 23 in. tall with thick heart, and rounded, fairly smooth, fleshy stalks. Combines the high quality of Utah with the self-blanching characteristics of Golden Self-Blanching. Highly recommended as a main-crop variety for all celery growing regions and as a midwinter crop in Florida.

Pkt. 25¢; ½ oz. 90¢; oz. \$1.75; ¼ lb. \$5.50

267 Easy Blanching—Stalks easily blanched to white

125 days. A second-early celery which will be ready for use soon after Golden Self-Blanching. Plants make a vigorous, upright yet compact growth, and the stalks are easily blanched. They are thick, solid, heavy, unusually meaty, pure white, crisp, free from any fiber or strings, and of extra-fine flavor. Resembles Golden Self-Blanching but stalks blanch white instead of yellow.

Pkt. 15¢; ½ oz. 65¢; oz. \$1.25; ¼ lb. \$3.75

266 White Plume—Recommended for fall and early winter

112 days. The earliest and the most easily blanched celery; at its best right after digging. Foliage is light green tinted with white. When blanched, the stalks are pure snowy white, tender and crisp, without any fiber or strings. Flavor is rich and nutty. Quality is good. Not recommended for late winter storage.

Pkt. 15¢; ½ oz. 50¢; oz. 90¢; ¼ lb. \$2.70

282 Giant Pascal—Known as Winter King

135 days. Considered by many the standard winter celery. Plants are large, upright and very heavy. Stalks are tall, thick, solid, stringless, and of a rich, nutty flavor; broad, distinctly ribbed, tender, crisp and very tasty. After blanching they are an attractive light yellow. Inasmuch as the stalks are green, soil should be used for blanching. If properly stored, it will keep in perfect condition throughout the winter months. Whether grown for home or market use, Giant Pascal has always given entire satisfaction.

Pkt. 15¢; ½ oz. 60¢; oz. \$1.15; ¼ lb. \$3.25

268 Golden Plume or Wonderful

115 days. Splendid early celery developed from the famous Golden Self-Blanching; the stalks, however, are larger. It is quite resistant to blight and rot and possesses very good eating qualities. Plants are of medium size, stocky, compact, and have a solid, full, creamy heart of the highest table quality. The thick, heavy stalks blanch readily to a beautiful light yellow; the flavor is distinctly nutty and rich. The many good qualities of this widely grown early yellow celery commend it to all growers for home and market.

Pkt. 15¢; ½ oz. 60¢; oz. \$1.10; ¼ lb. \$3.30

How to Grow CELERY

For the earliest crop, start the seed in a hotbed or in the house, allowing 10 to 14 weeks to produce plants large enough to set out when weather gets warm. For the fall or main crop, sow seed in the open ground as early in the spring as the soil can be worked into good condition. Cover seed with no more than ¼ in. of fine soil. Celery requires a rich, well-manured soil and plenty of moisture for best results. Soil, boards, or celery paper may be used to blanch the stalks. A pkt. of seed will produce about 400 strong plants; 1 oz. about 7500 plants. Days to maturity are from the time the plants are set out in the garden.

CELERIAC

(Turnip-Rooted Celery)

293 Giant Prague 120 days. The edible portion is the large, thick root, which may be used when it has grown about 2 in. across; fully grown roots may average 4 in. in diameter. Celeriac has a flavor similar to celery and is highly valued boiled or used in vegetable soup, stews, and other dishes. It grows best in a moderately moist yet well-drained soil, which is fairly rich in barnyard manure. Grow as you would celery except that it does not require hilling or blanching. Roots may be stored in moist earth or sand for winter use.

Hybrid Yellow SWEET CORN

Hybrid Corns are of special value to market growers, canners and to many home gardeners because the ears from one planting mature at about the same time; in addition to this uniformity of maturity they are noted for their high yield and resistance to Stewart's disease or bacterial wilt. If you prefer to have ears over a long period, plant two or more hybrids of different maturity dates. It is not advisable to save seed from plantings of hybrids because there will be a reduction in yield the next year. For best results, be sure to get new seed each year.

How to Grow SWEET CORN

Plant seed after all danger of frost has passed and the soil has become thoroughly warm, in rows 2½ to 3 ft. apart, spacing the seeds 4 to 6 in. apart in the row; cover with 1 in. of soil and later thin to stand 9 to 12 in. apart. Some prefer to sow 5 or 6 seeds in groups, allowing 2 to 3 in. between the seeds and spacing the groups 2 to 3 ft. apart in the row; allow 2 to 4 plants to remain in each group, depending on the fertility of your soil. For a continuous supply, sow varieties which mature in succession; also make additional sowings when the preceding planting is up and well started; allow enough time for your last planting to mature before the first expected frost in your locality. Corn should be planted in blocks of at least 4 rows side by side rather than in a single long row, to insure pollination and the development of a full set of kernels. A pkt. will plant 4 rows, each about 25 ft. in length; 1 lb. will plant 300 groups or so-called "hills."

Burpee's Golden Bantam

Georgia Collards

BROCCOLI Italian Green Sprouting

Most easily grown and delicious flavored vegetable for home, market and freezing. Plants are tall, erect and vigorous, 2½ ft. and more in height. They should be staked or given some other form of support.

Seeds sown in early spring outdoors will furnish heads in summer while sowings made in midsummer will provide for a late summer and fall crop. For the earliest crop, sow the seeds early in hotbed or house; transplant the young plants to the garden when soil has become warm. A pkt. will produce about 250 plants; an oz. 3000.

157 Calabrese 85 days. The central large, cauliflower-like head of bluish green flower buds grows 5 or 6 in. in diameter and after being cut numerous smaller heads appear on the side branches over a long period. Keep green sprouts cut off before the flower buds open.

Pkt. 20¢; ½ oz. 45¢; oz. 80¢; ¼ lb. \$2.40

156 De Cicco 78 days. Very similar in every way to Calabrese but ready a week earlier. Recommended highly for home and market.

Pkt. 25¢; ½ oz. 60¢; oz. \$1.10; ¼ lb. \$3.25

BRUSSELS SPROUTS

158 Long Island Improved 120 days. Grown extensively on Long Island for the New York market and the most satisfactory variety for use throughout the U. S. Compact plants, 20 in. tall, with solid, round, cabbage-like sprouts measuring 1¼ to 1½ in. in diameter with a more delicate flavor than cabbage. This is a splendid vegetable.

Brussels Sprouts are easy to grow. In the South, seeds may be sown in the spring; elsewhere, sow seed thinly in a specially prepared seed-bed or coldframe before midsummer, allowing plenty of time for sprouts to mature before hard frosts; light frosts seem to improve the flavor. In about 30 to 35 days after the seed is sown plants should be big enough to transplant to the garden. Set them 18 in. apart in rows 3 to 4 ft. apart. The "sprouts," dark green, tightly folded, cabbage-like heads, appear along the central stalk at the joints of the leaves and appear first at the bottom of the plant. Therefore, the lowest sprouts on the plant should be picked each time, after which break off the leaves below the sprout to make further picking easier but do not remove the top leaves. Becoming more popular in home gardens. Suitable for freezing. A pkt. will produce about 250 plants; an oz. 3000.

Pkt. 20¢; ½ oz. 50¢; oz. 90¢; ¼ lb. \$2.70

CHICORY—Delicious, appetizing salad

297 Witloof (French Endive) 110 days. A choice salad delicacy for fall and winter. Sow seed in the spring. In early fall, cut off foliage 1 in. above soil level, cover with 8 to 10 in. of soil and keep in place with boards set along the sides for three or four weeks when a pure white blanched stalk should be ready. Cut off about 1 in. above the top of the root and repeat as above for a second crop, or if wanted during the winter in cold sections, dig the roots, store for a few days in a shed or pit so they may become thoroughly chilled, then place upright in boxes and cover with 10 in. of sand, light soil or peat moss. Water and keep in a warm place indoors. In about a month, the sprouts should break through the surface and be ready for use as a salad.

Pkt. 15¢; ½ oz. 40¢; oz. 75¢

CRESS—Easy, quick growing "green"

364 Fine Curled (Pepper Grass) 40 days. Grows very quickly and is of the easiest culture. The finely cut, deep green leaves have a pleasing, pungent taste and are excellent for flavoring salads, garnishing, or as a "green" alone or with lettuce. Best if used when young.

Pkt. 15¢; ½ oz. 30¢; oz. 55¢; ¼ lb. \$1.65

365 Upland 60 days. Leaves are dark green, thick, broad and grow in rosette early in the spring. At this time they are crisp, tender and of the same pungent flavor as water cress which it resembles though it succeeds in dry soil. May be used until seed stalks begin to form.

Pkt. 15¢; ½ oz. 35¢; oz. 65¢; ¼ lb. \$1.85

366 Water Cress 50 days. An appetizing, mildly pungent salad; also used for garnishing. Start seed in pots set in a pan of water and transplant seedlings into a shallow running stream of fresh water or grow in moist soil in a shady place and provide plenty of water. Extensively grown in greenhouses for market during winter.

Pkt. 25¢; ½ oz. 60¢; oz. \$1.10; ¼ lb. \$3.00

CORN SALAD—Lamb's Lettuce

351 Large Leaved Round 60 days. Quick growing plant for early spring, late fall or winter use. It is quite hardy, producing an abundance of gray-green rounded leaves which are sometimes served like lettuce but are better if mixed with more piquant "greens." May also be cooked like spinach or used for garnishing like parsley.

Pkt. 25¢; ½ oz. 35¢; oz. 70¢; ¼ lb. \$2.00

COLLARDS—One of the best boiling "greens"

299 Georgia 80 days. Erect, spreading plants, 2 to 3 ft. tall with large, juicy, green leaves which are usually stripped from the plants as they mature thus providing delicious boiling "greens" of fine quality throughout the entire season. Will stand light freezing which improves the mild cabbage-like flavor of the leaves. Does not form heads. Deserves to be better known.

Pkt. 10¢; oz. 20¢; ¼ lb. 60¢

Burpee Hybrid

60 days. High resistance to mosaic and downy mildew are the outstanding attributes of this true first generation hybrid white spine, slicing type cucumber. Vines are extremely vigorous, long lived and bear an abundance of well-formed green fruits of handsome appearance, 8 in. and more long, 2 1/2 in. wide, square at both ends with medium seed cavity and crisp, white flesh of excellent quality. Burpee Hybrid Cucumber outyields open pollinated varieties because the vines continue to produce their fruits most profusely long after the others have ceased.

Pkt. (30 seeds) 25¢; 3 pkts. 70¢; 1/2 oz. \$2.50; oz. \$4.50; 1/4 lb. \$12.00; 1/2 lb. \$20.00; lb. \$35.00

NOTE: Care should be used in picking cucumbers so as not to injure the vines. Do not yank or pull them off the plant; fruits should be cut from the plant with a small part of the stem attached.

"—The Burpee Hybrid Cucumber is the finest we have ever raised in all respects. Large dark green vines—loads of fine shaped fruit. No disease. No bugs. We enjoy them very much. Thanks for this new cucumber."

H. F. Denison, Waterloo, Iowa

"For years I have been trying to raise cucumbers and never got to first base, but thanks to your new hybrid cucumber, I am a success at last."

"Out of 1 packet of seeds, which I planted in five hills, I have already picked over two bushels and am still picking (Sept. 23). And what cucumbers—all of them 12 or more inches long and 3 inches thick with the most marvelous flavor—they are really tops and I am so pleased that I just had to write to you and tell you of your great new cucumber."

H. A. Saylor, Bethlehem, Pa.

"—I was not only pleased but actually amazed at the vigor and bearing qualities of your hybrid cucumber. I planted a packet thinking I might get a few cucumbers for our own use, and for weeks we had not only all we could use in our home, but all we could sell in our College Grocery Store; and they are still bearing (Oct. 4). I expect to pick about twenty pounds tomorrow. And the quality is very superior.—" Floyd Bralliar, Nashville, Tenn.

"The modest description given of the new Burpee Hybrid Cucumber leaves so much unsaid about this wonderful creation. I am wondering if you are fully cognizant of its real possibilities. I earnestly think that you ought to term it 'The Garden Cucumber de Luxe.'"

A. F. Schalk, Columbus, Ohio

"—Your new Hybrid Cucumber 'ready for use in 60 days' has beat your record by 4 days. I had fruit 56th day—"

Frederick M. Gittings, Catonsville, Md.

"—I am writing to congratulate you on the result obtained from your new Burpee Hybrid Cucumber. Never before have I been able to grow cucumbers. From five hills of your hybrid, I have more than the family could eat, have given away numbers of them and made 20 jars of bread and butter pickle."

W. B. Colson, Glen Ridge, N. J.

"—Have never before written a letter commending any product, but I feel that I must write you about your Burpee Hybrid Cucumber. They bore profusely and to my surprise there was still a cucumber on the vines today (September 23rd). They were all of nice size and flavor and we had a number 9 1/2 inches long, weighing 1 1/4 lbs. My one regret is that I didn't enter some at the Duchess County Fair."

Leon F. Clark, Poughkeepsie, N. Y.

"—Let me compliment you on your Burpee Hybrid Cucumber."

"To say the least, seed catalogs and their luscious illustrations are indeed most enticing, especially to an ambitious embryo gardener. For once, however, I have surpassed your artist's fondest imaginations. To my amazement I harvested these cucumbers, not by the small basket but by the bushel. At one picking the average cucumber weighed 1 1/2 lbs." Elmer H. Bielfeldt, Joliet, Illinois

"The Burpee Hybrid Cucumbers are a picture; straight, large, some 10 in. or more in length. And the flesh—crisp, icy cold, luscious beyond description." Mrs. Lou Pecan, Dennis Port, Mass.

"I have finished picking the patch of cukes I had from your hybrid seed and am very happy to state that they were the best I ever grew in the late fall. My main crop were Straight Eights. The Hybrid picked a little more than double the other crop with 80% fancy grades. I had much less than an acre of the Hybrid but they picked at the rate of about 500 bushels per acre. They also picked about 1/3 longer. I am sold on Burpee Hybrid as a money-maker."

J. E. Tooke, Grower and Shipper, Immokalee, Florida

"—My other varieties of cucumbers developed cucumber wilt. The Burpee Hybrid Cucumbers stayed free from disease although grown next to the diseased plants. Size and shape were excellent."

P. Daman, Hulton, Manitoba, Canada

"—I had 180 hills, Burpee Hybrid Cucumber; started cutting 100% quality cukes August 1st. These few hills netted me at farm \$300 but as the market went down I quit cutting. The vines stayed green until frost with bushels of cukes on the ground."

Walter F. Smith, Port Byron, N. Y.

Burpee's CUCUMBERS

May be harvested at almost any size depending on what purpose the fruits are intended. Different sizes may be picked at the same time, small ones for sweet pickles, larger ones for bread and butter pickles, slicing or dill pickles. Many gardeners prefer to plant the larger fruited varieties for table use and the so-called pickling types

and gherkins for relishes or pickles. If you have had poor success with cucumbers in the past, plant Burpee Hybrid listed on page 77. Letters from customers all over the country acclaim it as outstanding for yield, quality, color and disease resistance; many tell us we are too modest in our description. It is a top-notch.

How to Grow CUCUMBERS

Make your first sowing of cucumbers after all danger of frost has passed to supply fruits for summer use, and a second sowing 4 or 5 weeks later to furnish cucumbers for fall use and pickling. They succeed best in a fertile, light, well-drained soil. Well-rotted manure or organic matter dug into the soil where seeds are to be planted and side-dressings of commercial fertilizer after the plants have begun to grow are beneficial.

Plant in groups 4 to 5 ft. apart, placing 8 to 10 seeds in each group, and cover with ½ in. of soil. When plants are 6 to 8 in. high, thin to 3 or 4 plants to a group. A pkt. of seed will plant 15 groups; 1 oz. 50 groups or so-called "hills." Seeds may also be sown in rows 4 to 5 ft. apart, 4 to 6 in. apart in the row; later thin the plants to stand 12 in. apart in the row. To save garden space and make for easier gathering, cucumbers may be grown on a fence or trellis.

In descriptions, we refer to "White Spine" and "Black Spine" cucumbers; explanation of these two types is given below.

Explanation of White Spine and Black Spine Cucumbers are divided into two families, "White Spine" and "Black Spine." The spines are the miniature stickers that protrude from the warts when fruits are young. White spine cucumbers turn to a creamy white when old; black spine varieties turn to a yellowish orange when matured. All the pickling cucumbers listed below belong to the black spine group, as does Improved Long Green; the others that we offer are white-spined.

EGGPLANT

May be cooked in various ways. The fruits are at their best edible stage when the skin has attained a high gloss. Use when young, at which stage the seeds will be small and hardly noticeable. Keep fruits picked off as they become ready and plants should bear until frost.

A rich, sandy, warm soil produces the best plants and yields the highest number of fruits. Seed should be started in a hotbed, or indoors in shallow boxes or pans, 8 to 9 weeks before the time to set the plants out in the garden. When seedlings are about 3 in. high, plant singly into small pots, setting the plants in the open when all danger of frost is past and the soil has become thoroughly warm. A pkt. of seed will produce about 100 plants; 1 oz. 2000 plants. Days mentioned in descriptions represent the average time required from the setting of the plants in the garden until usable or marketable fruits are ready.

419 Burpee Hybrid —Prolific, early

70 days. Distinct first generation hybrid of outstanding qualities for home and market gardens. The plant is tall, tree-like, semi-spreading in habit, vigorous and produces continuously until frost if fruits are removed as they become ready. They are oval, medium-sized, and of a good dark purple. Most fruits do not touch the ground. More resistant to drought and disease than any commercial variety.

Burpee's CELTUCE—Combines the uses and flavors of CELery and LetTUCE

290 Burpee's Celtuce belongs to the lettuce family but is entirely different in its growth and uses. When plants are young, the leaves may be used as lettuce or as boiling "greens," but its chief value is its central stem or stalk. Whether celtuce stalks are to be eaten raw or cooked, you re-

move the lower leaves and then cut all the outer skin down to the light green and tender flesh. Cooked celtuce stalks have a pleasing, mild flavor suggestive of celery. Young leaves have four times the Vitamin C content of head-lettuce leaves.

Loosehead or Cutting LETTUCE

The best type for general home garden use, especially in sections where summers are hot.

These do not form solidly folded heads, but where the plants are grown singly at a suitable distance apart, they make a large, round, thick bunch of leaves which are blanched to a light green or creamy yellow in the center of the plant. The leaves are heavily curled or crumpled, attractive in appearance, and of delightful crispness and mild flavor. They are splendid to provide an extra-early supply of delicious salad for, when just a few inches tall, the thinnings may be used for the table.

485 Grand Rapids ☉

45 days. Widely grown non-heading lettuce with intensely fringed and curled leaves. Used extensively for forcing in the greenhouse during winter, and is just as valuable for growing outdoors during the spring, summer, and fall. Thick sowing will give an abundance of young, tender leaves very early in the season, but if the plants are spaced 12 to 18 in. apart each way, they will produce immense round masses of sweet, juicy, brittle, light green leaves of good flavor.

Pkt. 10¢; oz. 30¢; ¼ lb. 90¢

493 Black-Seeded Simpson

Lettuce grows best during the cool seasons of the year, and in a rich, moist, cool soil, so that the seed should be sown thinly in the spring as soon as the soil can be worked, in rows 1 to 1½ ft. apart, and covered with ½ in. of fine soil. Several successive sowings may follow about two weeks apart, then discontinue sowings until late summer when they may be made to provide lettuce during the fall. Jumbo Virginia Peanuts

PEANUTS *Top ranking protein foods*

Roasted peanuts, salted peanuts, peanut butter and peanut candies, are well known to all of us. Have you ever tried them baked as you would beans? Leave skins on or take them off; they are, however, more palatable if skins are removed.

For best results select warm, light or sandy soil rich in lime. Plant in rows 2½ to 3 ft. apart, spacing the shelled nuts 8 to 10 in. apart in the row, or place them 16 to 18 in. apart in the row if planted in the hulls. Cover with 2 in. of soil. Cultivate and hoe freely. In the fall, before frost, dig and hang vines under a shed or in an airy room to cure. One pkt. will sow from 15 to 25 ft. of row; 1 lb. from 100 to 200 ft. according to method used in planting. Peanuts are shipped in the hull to prevent damage to the tender seeds. They can be planted either shelled or whole.

Sow seed in early spring in rows 1½ ft. apart and cover with 1 in. of fine soil. Thin the seedlings to stand 4 to 5 in. apart. How to Grow WATERMELONS

Plant seed after all danger of frost has passed and the soil has become thoroughly warm. Place 6 to 8 seeds in groups, allowing 2 to 3 in. between the seeds and space the groups 6 to 8 ft. apart each way. Cover seed with ½ in. of fine soil. Thin to 2 or 3 plants in each group after plants are well established. Rich, rather sandy soils produce the finest watermelons, but a well-drained loam is also suitable. A pkt. will plant 6 groups or so-called "hills"; 1 oz. about 30 groups.

MUSKMELONS (CANTALOUPEs)

To really enjoy a muskmelon, fruits should be allowed to fully ripen on the vine for, with the exception of Honey Dew, they do not become sweeter in flavor after being picked. Fruits are ripe when the stem, attached to the melon, will slip from it with a slight touch of the thumb. If the stem does not slip off easily, the melon is not ripe and should remain on the vine. Many persons can select ripe melons by their aroma.

How to Grow MUSKMELONS

The most suitable soil is a rich, warm, sandy loam. Sow the seed after the ground has warmed up, putting 8 to 10 seeds in groups, allowing 2 to 3 in. between the seeds and cover with 1 in. of fine soil. The groups should be spaced 4 to 6 ft. apart each way. Thin to 2 or 3 plants to a group after the plants are well established. Well-rotted manure dug into the soil where seeds are to be planted and side dressings of commercial fertilizer after the plants have begun to grow are usually beneficial. A pkt. will plant 12 groups, 1 oz. 50 groups or so-called "hills",—a term that is misleading to many gardeners.

ONION and GARLIC SETS

Orders for Onion and Garlic Sets cannot be accepted after May 1

It pays to plant Burpee's sets of the best quality which are produced under ideal conditions from a select strain of seed, carefully screened and stored at the proper temperature until they are sent to you. One lb. of onion sets will plant 50 ft. of row.

Onion and garlic sets should be planted as early in the spring as the soil can be worked. Short cultural directions are given below; full directions are sent with every order.

Because of State law, we regret we are unable to ship onion sets to California.

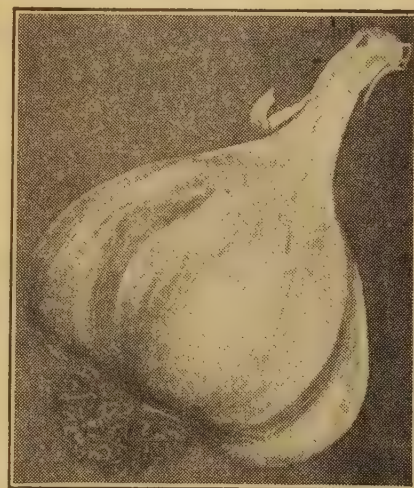

9967 Yellow Onion Sets These sets will mature into large, handsome, globe-shaped onions with bright golden yellow skin and creamy white, mild flesh. May be used in the spring as green bunching onions. Fully matured bulbs are reliable keepers for winter storing. Lb. 35¢; 2 lbs. 65¢; 5 lbs. \$1.50

9968 White Onion Sets Produces round, slightly flattened, silvery white, mild onions of the highest quality. How to Plant ONION and GARLIC SETS

Onion Sets. Make furrows about 1 in. deep, into which lightly press the sets but do not cover them. Space sets 3 in. apart in rows 12 to 24 in. apart, depending on method of cultivation to be used.

Garlic Sets. Each set or bulb is made up of several sections called cloves held together by a thin paper covering. Before planting, separate each set and plant the cloves 4 to 6 in. apart in rows 1½ to 3 ft. apart. Cover with 1 in. of fine soil.

9975 GARLIC SETS

Extra select California grown

Garlic is the most pungent of the onion family, and is used for flavoring soups, stews, sausages and salad dressings. Sets are easily grown and may be kept without any trouble for use during the winter. We supply mother bulbs as pictured above; it is necessary to separate the cloves before planting which is very easily done.

For flavoring salads, raw or cooked vegetables, soups, sauces, stews, etc., or served as a separate vegetable, onions are universally popular. A large selection of varieties from which to choose—round or flat in shape, mild or fairly strong in flavor, and white, yellow or red colored skin although the flesh of all is white. For green onions or large onions, you have your choice of sowing seeds or planting sets. You may pull green onions as needed before the bulb enlarges or large onions after bulbs are formed. Fully matured onions may be kept for winter storing. Some varieties are better than others for this purpose as explained in the descriptions.

682 Sweet Spanish © UTAH STRAIN

110 days. The very large, globe-shaped Spanish onions, which are sometimes incorrectly called "Bermudas," are exceptionally mild, fine grained and sweet—excellent when cooked or for use in salads or other ways without cooking. They are remarkably uniform, have light yellow skin and pure white, firm, crisp, tasty flesh. Although onions of this type will not keep as long in storage as Yellow Globe Danvers, Southport, or Ebenezer, Utah Sweet Spanish will stand shipping and storage for short periods better than Prizetaker, Gibraltar or the Bermuda varieties. In northern states, where summers are short, seed is usually started early.

How to Grow ONIONS FROM SEED

Sow seed as early in the spring as the ground can be worked, in rows 1 to 1½ ft. apart. Cover the seed lightly. The soil best suited to grow onions is one that is reasonably fertile, well drained, and well prepared. If fully matured onions are wanted, thin the seedlings when 3 to 4 in. tall, to stand sufficiently far apart to develop without touching one another. When the bulbs have reached maturity, bend down the tops to hasten ripening before the onions are harvested. Store in a dry, free-from-frost place over winter. A pkt. of seed will sow about 20 ft. of row; 1 oz. 200 ft. See page 89 for How to Grow Onions from Sets; we offer both the white and yellow.

696 Southport White Globe

112 days. Most attractive large round onion with pure paper-white skin. The flesh is also pure white, sweet, juicy, and of most delightful mild flavor. A main-crop variety which will keep well for some time in fall storage. A ready seller in market; popular with home gardeners.

Wrinkled-Seeded Early PEAS

Wrinkled-seeded peas, both early and main crop varieties, are favored by many home gardeners, as well as market growers and canners, because of their extra sweetness and better quality. Contrary to popular belief, they can be planted as early as smooth-seeded varieties—as soon as soil can be prepared, but do not sow in cold, wet ground. They grow best when weather is cool.

Blue
Bantam

There is no better, sweeter, more delicious pea for home garden and market than Burpee's Blue Bantam—large, dark green pods, fine quality, heavy yield, reasonable earliness, and long bearing season. Plants are 15 to 18 in. tall, with coarse, dark green foliage, often branched. Pods are 4 in. long, very dark green, pointed and rather slender, containing 7 to 9 large, sweet, deep bluish green peas of a distinctly superior flavor; excellent for freezing. Blue Bantam is to peas what Golden Bantam is to corn. It is early enough to make a crop in practically all parts of the country if planted in proper season. You will be delighted with its quality and productiveness. Each year it continues to be our biggest seller.

Vines grow 2½ ft. tall, wilt-resistant and bear a big crop of dark green, blunt pods, 3½ in. long, filled with the most luscious dark green peas which are highly recommended for freezing. Seed crop is very short this year. Pkt. 25¢; ½ lb. 60¢

To enjoy the sweet, delicious flavor of peas, pick pods before they become fully developed and while still green; then cook as soon as possible, because they lose flavor rapidly after picking, the sugar changing to starch. Grow your own and get the real, sweet flavor of garden fresh vegetables at their very best. For winter use, can or quick freeze any that you may have in surplus.

Seed is smooth, showing slight dimples. Because of its dwarf habit, Radio is ideal for the home garden; also used for local markets.

How to Grow PEAS

Peas make their best growth during cool weather so that the first planting of seed should be made as early in the spring as the soil can be worked. Sow an early variety two or three times at 10-day intervals or choose from the smooth-seeded early, wrinkled-seeded early and main-crop varieties. Sow again in late summer for a fall crop. Planting space available more or less governs the number of sowings and the choice between tall and dwarf varieties. Peas are usually planted in double rows 3 in. apart, the seeds dropped 2 in. apart and covered with 1 to 2 in. of soil. Double rows should be spaced about 2½ ft. apart. For best results, provide supports for the tall-growing varieties. A pkt. will sow 20 ft. of row; 1 lb. 100 ft.

EDIBLE-PODDED or SUGAR PEAS

PODS ARE COOKED LIKE SNAP BEANS

Sugar Peas possess the tenderness and fleshy podded qualities of a snap bean and the flavor and sweetness of fresh green peas. When young the pods are cooked like snap beans; the peas are not shelled. At this stage, pods are stringless, brittle and succulent. Should pods develop too fast for use as snap beans, seeds may be eaten as shelled peas and are of the best flavor before they have reached full size. The following varieties are entirely free of fiber or parchment. Vines of the taller growing varieties should be given support of string or brush to climb upon for best results.

815 Mammoth Melting Sugar ©

75 days. Well-known, productive, tall-growing variety. The fleshy, tender, 4 to 4½ in. pods are very light green, sometimes twisted, moderately broad and blunt-ended, sweet and delicious. White seeded. Vines grow 4 to 5 ft. tall.

SPINACH

One of our most wholesome "greens" in the spring and early fall when cool weather is most favorable for its growth. Also suitable for quick freezing. The New Zealand Spinach will supply delicious "greens" throughout the summer and fall. It withstands heat, as does Swiss Chard and Timpala. Why not plant some of each class to supply you with vitamin-rich fresh "greens" throughout the season; canned or frozen for use during the winter?

999 Bloomsdale Long Standing

48 days. Quick-growing hardy spinach much planted for home and market use as well as for canning. The glossy dark green leaves are intensely crinkled, in addition to being of a very heavy texture. Valuable for spring sowing or planting in the fall. Remains in the rosette stage for a long time without bolting. An extremely heavy yielder of delicious "greens."

THE HOT WEATHER OR
EVERLASTING SPINACH

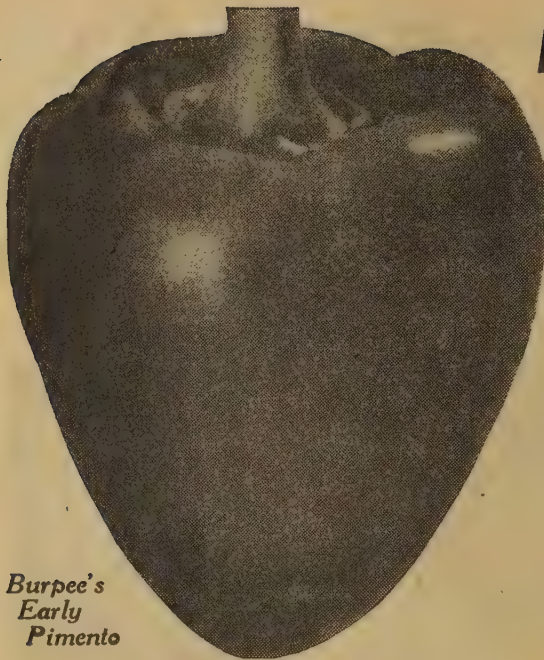

70 days. When prepared for the table, it so greatly resembles spinach in appearance and flavor that most persons will not be aware of the difference. It makes strong plants which resist heat and produce an abundance of fleshy, brittle green leaves and young stem tips that can be picked repeatedly all during the summer and fall. Plants attain a spread of 4 ft. when fully grown and thrive in any good soil in a warm location. Seeds are large, hard horned and slow to germinate; it is advisable to soak them over night before planting and do not sow outdoors until soil is warm. One sowing will do for the season.

Pkt. 15¢; oz. 35¢; ¼ lb. \$1.00; ½ lb. \$1.80

How to Grow SPINACH

Sow seeds very early in the spring, either broadcast or in rows 18 to 24 in. apart; cover the seed with 1 in. of soil and thin plants to stand 5 or 6 in. apart in the rows. At each picking, remove every other plant, which will allow room for remaining plants to fully develop. Additional sowings may be made when the preceding planting is up and growing, but the last should be two months before hot weather is expected. For fall use, sow in late summer; for early spring use, where winters are mild, sow in early fall and cover with a few inches of hay, leaves or litter. A pkt. will sow 25 ft. of row; 1 oz. 75 ft. Directions for growing New Zealand spinach are given on the seed bags.

Burpee's PEPPERS

*Burpee's
Early
Pimento*

Peppers are classed in two groups, the sweet or mild and the hot. The sweet fleshed peppers are desirable for slicing, salad and stuffing; they are of different forms,—some blocky (Burpee's Fordhook), some heart-shape (Burpee's Early Pimento), and another like a tomato in shape with a very mild flavor (Burpee's Sunnybrook). All are green at first changing to red when ripe except Oshkosh which turns to bright yellow. Pepper plants will produce more fruits if they are kept picked when green in color.

Hot fleshed peppers vary in shape from those resembling a cherry to the extremely hot little tabascos and the long red cayenne. They are red when ripe. Fine for sauces, flavoring and pickling either fresh or dried.

847 Burpee's Early Pimento ☉

65 days. Heart-shaped, pendent, and when mature the fruits are $3\frac{1}{2}$ in. long and $2\frac{1}{2}$ in. in diameter at the top, smooth, dark green, turning bright red when ripe. The flesh is $\frac{1}{4}$ to $\frac{5}{16}$ in. thick—a heavy walled pepper which is sweet and mild at all stages. Most desirable for home, market, freezing and for making canned pimentos. Plants are prolific. *All-America Winner*.

The flesh is tender, crisp and always sweet. An excellent, productive pepper for early market and home gardens. We highly recommend it.

How to Grow PEPPERS

Sow seed in a hotbed or indoors in shallow boxes, pots or seed-pans of rich soil, allowing 8 to 10 weeks to produce plants large enough to set outdoors when all danger of frost is past. When the soil has become warm, set the young plants in the garden, 18 to 24 in. apart in rows 2 to 3 ft. apart. Peppers do best in a light, sandy, moderately rich soil. A pkt. of seed will produce about 100 plants; 1 oz. 1500 plants. Days to maturity given in descriptions are from the time the plants are set out in the garden.

Burpee's PUMPKINS

The very mention of the word "pumpkin" reminds one of the sweet, delicious flavor of pie. Fruits may be used in the fall or stored in a dry, moderately warm place for use during the winter; the flesh may also be canned. Some varieties of winter squashes, especially Boston Marrow, commonly known as the Basket Pumpkin, are generally grown for pumpkin pie instead of the true pumpkins. The best pumpkin for general use whether in the home garden, market garden or roadside sales is Small Sugar.

25 days. Perfectly round, bright scarlet radish, about 1 in. in diameter with bright scarlet, thin, tender skin and icy white flesh which is crisp and juicy. It has a mild, delicate flavor. 886 Crimson Giant Globe — Big, round radishes

29 days. Differs from most others as the roots attain a large size without becoming hollow or pithy. The shape is a perfect globe, 2 in. in depth, 1½ in. in diameter, with thin, tender skin of deep crimson and solid white flesh which is firm, crisp and mild in flavor. It is a very popular variety, of large size, finest quality and remains edible for a long time. Sow seed thinly to permit full development of the roots, and for the biggest radishes see that the soil is moderately moist, fertile and deeply prepared. This variety should be thinned to a wider spacing than smaller varieties; we suggest leaving at least 2 in. between plants in the row for full development of large roots.

White Icicle Radish

How to Grow RADISHES

Sow the seed of the earliest and midseason radishes as early in the spring as the ground can be worked, in rows 12 to 18 in. apart, covering ½ in. deep. Thin small varieties to stand 1 to 1½ in. apart in the row; larger varieties, 3 to 4 in. apart. Make additional plantings when the preceding planting is up and well started; these may be made until early summer, then resume one month before frost. Seed of winter radishes is sown in the summer for fall and winter use. A moderately light soil produces the smoothest and best roots. A pkt. will sow about 20 ft. of row; 1 oz. 100 ft.

Midseason or Summer Radishes

The following varieties require more time to mature than the spring radishes so that they are becoming ready to use when the others are gone. As they grow more slowly, they endure heat better and are valuable for summer use. Flesh is mildly pungent. We suggest a deep and thorough preparation of the soil to obtain the best roots.

928 Early Long Scarlet Short Top 30 days. The very best long, brittle, red radish, almost 6 in. in length, and matures in about 4 weeks. Skin is an attractive bright scarlet-red; the tender flesh is icy white and of the finest flavor, somewhat more pungent than Icicle. Grow partly above ground which makes pulling easy.

Pkt. 10¢; oz. 30¢; ¼ lb. 90¢; ½ lb. \$1.55

959 White Strassburg 40 days. Roots are mildly pungent; 4½ to 5 in. long and 2 in. in diameter. Skin and flesh are white, crisp, tender and of an icy texture. Widely grown for home garden use and by market gardeners in some sections for local sales. Remains long in good condition.

Summer SQUASH

In descriptions, we give the average size of fruits when fully grown. For the best eating, summer squashes are used when immature, usually when very small; in fact, Early White (Scallop or Patty Pans) are delicious if cooked whole when very tiny—an inch or more across. Bush varieties take up little room and are especially adaptable for the small garden; running varieties need plenty of room for the vines to ramble over the ground. They may, like pumpkins, be planted among the corn, allowing 8 to 12 ft. of space for each group. See cultural directions on next page.

Fall and Winter SQUASH

These produce large hard-shelled fruits which are grown to full size and may be stored for use during the winter. Valuable for baking, boiling, making pies, etc. Many of the varieties here listed make excellent "pumpkin" pie and some are canned extensively for that purpose. Unlike summer squashes, fruits of the fall and winter varieties must remain on the vine until fully matured; gather them before frost, leaving part of the stem attached to the fruit. Handle carefully and avoid bruising. Easily stored in any dry place. They keep best if temperature of 70 to 75° F. is maintained for a week or two after which it should be held at 45 to 50° F.

Summer Squash. Sow seed after all danger of frost has passed, putting 8 to 10 seeds in groups, allowing 2 to 3 in. between the seeds and spacing the groups of bush varieties 4 ft. apart each way and those of the running kinds either 8 by 8 ft. or 10 by 12 ft. apart. Thin bush varieties so that 4 of the strongest plants remain in a group; running varieties allow 3 plants to a group. A pkt. will plant 10 groups; an oz. 50 groups.

Winter Squash. Sow seed in the same way as given above for the running varieties of summer squash. A pkt. will plant 8 groups; 1 oz. 30 groups. All varieties of squash grow best in a fertile, deep soil.

Burpee's SWISS CHARD

Burpee's Rhubarb Chard

How to Grow SWISS CHARD

Sow seed any time from early spring until midsummer in rows 18 to 30 in. apart; cover with $\frac{1}{2}$ in. of soil and thin the seedlings to stand 8 to 10 in. apart in the row. The plants are quite hardy and will yield throughout the summer and fall until frost. All chards are suitable for freezing. They yield heavily wherever beets can be grown. A pkt. will sow 25 ft. of row; an oz. 100 ft.

"Cut and Come Again" vitamin-rich, crisp leaves; stands hot weather; abundant, continuous yielder

Leaves are cooked and served like spinach and the mid-ribs like asparagus, or both may be cooked together. Leaf-stalks make delicious fritters. Cutting may be done by stripping or removing outer leaves of various plants, thus allowing the center and remaining leaves to grow, or entire plants may be cut off a couple inches above the crown and new leaves will be produced. A healthy and nutritious vegetable.

153 Burpee's Rhubarb Chard ©

60 days. A Swiss Chard that looks like rhubarb. The leaf-stalks, considered by many as the most delicious part of the chard plant, are bright but delicate, translucent crimson; the rich color extends out through the veins into the dark green, heavily crumpled leaves. Easily grown, thrives everywhere. You will enjoy the different, tasty, delicious flavor of Burpee's rhubarb chard. Whether you cook the leaf-stalks alone, use only the leaves, or cook both together, you will find a sweetness you never knew existed in a leafy vegetable. Plants are so beautiful they may be used in flower borders. Leaves and stalks are nice in flower arrangements; they keep fresh for a long time in water.

135 Burpee's Fordhook Giant ©

60 days. The rich green leaves are much crumpled or savoyed, and when grown well, will measure 10 in. in width and $2\frac{1}{2}$ ft. in length. The texture of the leaves is thick and fleshy. The pearly white stems or stalks measure $2\frac{1}{2}$ in. in width and make an excellent dish prepared like asparagus. Plants are truly of giant size and yield a heavy crop.

137 Lucullus 60 days. Well-known variety of Swiss Chard for which some culinary experts claim first place on account of its mild, spinach-like flavor. The light green, heavily savoyed, crumpled leaves grow to large size, and are very tender when cooked. The thick white stalks are splendid for creaming like asparagus.

TAMPALA

**BETTER THAN SPINACH
STANDS HOT WEATHER**

Burpee Fordhook Tampala

Tampala, as a cooked, canned or quickly frozen green, is, in the opinion of many, far superior to spinach or Swiss Chard. Its color is more appetizing, its flavor more delicious, shrinks very little, holds its color better and requires less cleaning and washing when preparing the leaves because they are smooth, not savoyed.

Tampala is a so-called hot-weather plant doing best when days are long. Seed, then, should not be sown until the ground has become warm. Within 6 to 8 weeks from sowing, Tampala is ready to use when the entire plants make the most delicious "greens", either eaten raw as a salad or cooked as you would spinach.

For a continuous supply of the most tender leaves, make several successive sowings 10 days to 2 weeks apart and use young plants when 6 to 10 in. tall. However, a plant may be left every 2 ft. and leaves picked as they mature or 4 to 5 in. tips of each branch may be quickly gathered instead of picking individual leaves. These young stem tips and leaves may be cooked together, but for the best eating, we suggest that you separate stems and leaves.

So tender are the leaves that they require only 5 minutes to cook with just the water that clings to them when washed. Stems are cooked like asparagus for 8 to 10 minutes, or a little longer, depending on size; they have a flavor suggestive of artichokes.

1377 Burpee Fordhook Tampala

It is equal in all respects to Burpee Tampala and Burpee Fordhook Tampala, listed above, but instead of the leaves being green they are variegated green and red, the red extending out along the veins of the dark green leaves whose underside also is red. When cooked, prepared, and served like spinach it is most delicious.

1133 BURPEEANA EARLY HYBRID—New for 1948

58 days. New and distinctly different extra early, true, first generation hybrid tomato created at Burpee's Fordhook Farms, to offset the usual shortcomings of many of the open-pollinated early varieties. Fruits of Burpeeana Early are of an attractive, deep globular shape, medium size, smooth, firm, rich scarlet, average 5 ozs. in weight, and are borne profusely in clusters of from 5 to 8. At Fordhook Farms, Burpeeana Early produced the highest *early* yield of all varieties in our testing grounds. Quality is excellent; flavor is mild.

Plants are of spreading habit with plenty of foliage to afford protection from sun-scauld. Adapted to staking. Valuable early tomato for the home garden; profitable for early market.

Pkt. (30 seeds) 35¢; 3 pkts. \$1.00; 5 pkts. \$1.50

1121 FORDHOOK HYBRID

60 days. Early, highly prolific, long bearing, true, first generation hybrid noted for its uniformly shaped, smooth fruits which are of medium size, average 6 ozs. in weight, oblate to globular in shape and borne most freely in large clusters. Colors evenly to a clear bright red all over; flesh is solid and mildly acid sweet in flavor. Seed cavities are small; interior is quite firm.

Plants begin to bear early and continue to produce profusely throughout the entire season. Especially recommended for early market and home garden.

Introduced by us in 1945, Fordhook Hybrid has established quite a good reputation for itself. Our files are full of nice testimonials. We appreciate each and every one but space permits our quoting only a few.

WORDS OF PRAISE FOR FORDHOOK HYBRID

"—Your Fordhook Hybrid Tomato was the talk of the town. In my second picking, I picked a bushel and a half off 14 plants. Not one was marked or burnt. The plants were vigorous and bore fruit right to the end. . . ."

G. W. Romani, Beverly, Mass.

"—I picked my first Fordhook Hybrid Tomatoes on July 6th and from 38 plants, I have picked 323 pounds to date (Sept. 5). The plants were staked to 7 ft. stakes and they over-ran them. . . ."

Thomas G. Hobbs, Gastonia, N. C.

"—Your Fordhook Hybrid Tomatoes were the finest I've ever seen. I entered them in the Bath Grange Fair and took first prize. The rules called for five perfect fruits to be entered but it would have been just as easy to have picked a bushel of perfect ones—all exactly the same in size, perfection and appearance. Congratulations on your hybrid! . . ."

Mrs. Lee Merkel, Everett, Ohio

"—Fordhook Hybrid tomatoes were the best tomatoes we ever tasted, so little acid. We have picked 653 fruits from June 15th up to September. . . ."

Harry L. Lake, Naval Base, S. C.

"—Your Fordhook Hybrid Tomatoes were truly a magnificent sight. They were tasty and fine eating. Our plants were prolific until killed by freezing weather around the 28th of November. My wife processed 50 quarts of the fruits as well as 50 quarts of tomato juice which we are now enjoying (Jan. 18). . . ."

John M. Bland, Louisville, Ky.

Burpee's Hybrid TOMATOES

1135 CLINTON HYBRID

75 days. Burpee's highly prolific, true, first generation hybrid, main-crop, all-purpose tomato which has proved very satisfactory in many sections even in the Middlewest. For that reason, we named it Clinton in honor of the City of Clinton, Iowa, the home of Burpee's Western Headquarters.

Plants are large, vigorous, with medium-dense, dark green foliage. Fruits are large, weigh about 8 ozs.; bright scarlet, globular-oblate in shape, with firm, meaty flesh of the most excellent quality.

Pkt. (30 seeds) 35¢; 3 pkts. \$1.00; 5 pkts. \$1.50

1132 BURPEE HYBRID

70 days. An all-purpose, main-crop, true first generation hybrid outstanding for the quality and rich flavor of its fruits. It is a great producer; earlier and more prolific than Marglobe or Rutgers.

Fruits are medium to large, firm, thick walled, average 8 ozs. in weight, deep globular in shape, scarlet-red in color; flesh is meaty and of excellent quality. A valuable tomato for the home garden, market grower, "green wrap," canning and long-distance shipping. *Shown in color on back cover.*

Pkt. (30 seeds) 35¢; 3 pkts. \$1.00; 5 pkts. \$1.50

WHY HYBRID VEGETABLES ?

It is a well-known fact that true hybrids grow faster than open-pollinated varieties, show more vigor, produce greater yields and often, over a longer period of time, bear a more uniform product and, very often, it is possible to incorporate into the hybrids resistance to a number of diseases. Many hybrids not only combine the best features of their parents but even far surpass the best that either parent has to offer. Extra yield, larger fruit size, better quality, depend, to a large measure, on the available nutrients in the soil; therefore, keep your soil rich by proper fertilization.

HYBRIDS PROVE THEIR VALUE

"—We think that, at last, you may have the perfect tomato in your Burpee Hybrid. It seems to have everything—size, color, the right flavor and productivity. The vines have plenty of foliage to protect the fruit against sunburn. We especially like the way this brilliant tomato ripens right up to the stem. We had clusters with 12 full sized tomatoes. . . ."

C. S. Ward, Lakeside, Ohio

"—There was better than a bushel of Burpee Hybrid Tomatoes on each plant and, besides that, they were perfectly smooth and simply delicious. It really does pay to buy the best. . . ."

Thomas Christensen, Dowagiac, Mich.

"—I have used your Hybrid Tomatoes ever since they came out and it goes without saying that I wouldn't be bothered with anything else. . . ."

Mrs. A. A. Ferrari, Washington, N. J.

"—I particularly like your hybrid tomatoes. They produce marvelously well. I have counted 45 tomatoes, varying from 3 to 11 in. in circumference on a plant at one time. Today (Oct. 15th) there still are blossoms on some of the plants and a number of small tomatoes. . . ."

May Stannard, Topeka, Kansas

"—No kidding, I now have (July 12th) Burpee, Clinton, and Fordhook Hybrid plants with many tomatoes, 2¾ in. diameter, and plenty of blooms. Plants stand 5 ft. and are plenty husky. . . ."

R. L. Herdman, Pittsburg, Pa.

"—The Burpee Hybrid Tomato plants grew well with bountiful yield. The fruit showed a high degree of resistance to the late tomato blight which was so prevalent in the latter part of the summer. . . ."

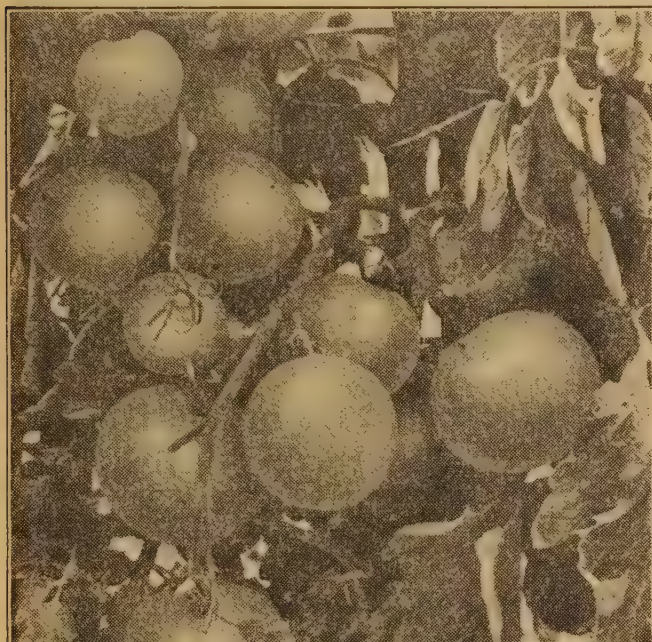

E. L. Wallace, Bethesda, Md.

"—I have planted your hybrid tomato seed every year since you developed them and I am highly gratified with results. I do not plan to grow any other kind this year. . . ."

Dr. E. L. Edwards, Morganton, N. C.

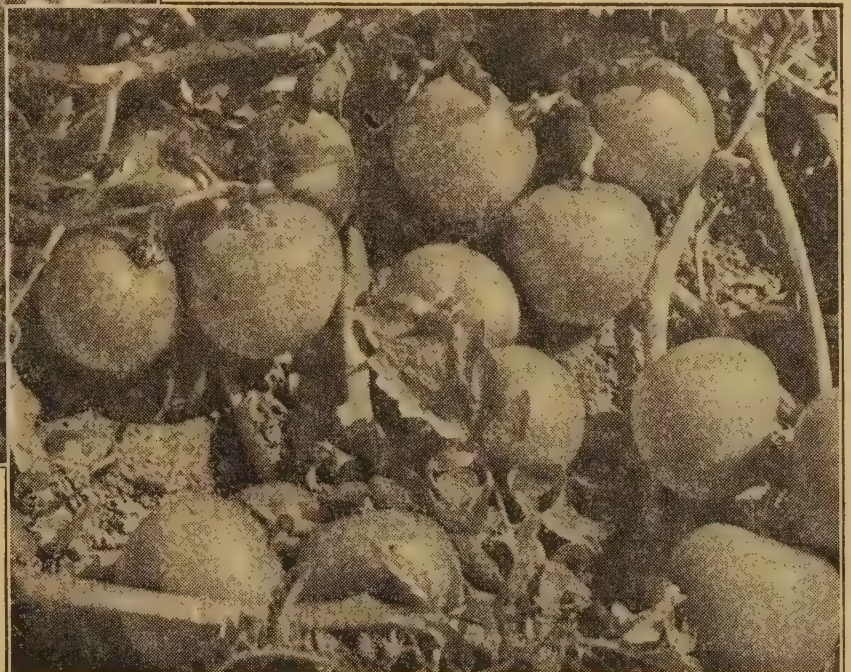

"—Clinton Hybrid was outstanding in quality of its fruit, most of which colored uniformly, showed no cracking when ripe, was of uniform globe shape and had a solid flesh with good interior color. Both in early yield and yield for the whole season, it was significantly the highest of those tested in 1946 trials. . . ."

The color is bright scarlet, uniform and attractive. Slice Burpee's Table Talk Tomato and you will marvel at the structure and the firmness of its interior. The plant is short stemmed and bushy, but with no self-topping tendency. The leaves are small and set closely together, thus forming a dense mass of foliage which protects the fruit from sun-scald.

How to Grow TOMATOES

Sow seed in a hotbed, or in a shallow box in the house, allowing 6 to 8 weeks to produce plants large enough for setting outdoors when weather becomes warm. When plants are about 2 in. tall, transplant to stand 4 in. apart each way, or pot singly in 3 in. pots. Plant outdoors when all danger of frost is past. Where summers are long, seed may be sown directly outdoors when soil and weather get warm. When plants are large enough to transplant, set them where they are to remain; such plants will come into bearing later than those started earlier indoors or in a hotbed. A pkt. will produce about 200 plants; 1 oz. 2000. Days to maturity are from field setting of the plants until first usable fruits are ready.

Burpee's Jubilee Tomato

Orange skinned, orange fleshed

Burpee's Jubilee

1111 Jubilee compares favorably with the best of the standard red varieties in shape, smoothness, quality and solidity. Entirely different from any yellow or orange tomato you have ever grown. Fruits are large, golden orange, deep-globular, heavy, full flavored and really delicious; the orange colored interior is modern, thick-walled, with few seeds. Most attractive when sliced and does not leak when cut. Makes delicious juice. Very high in Vitamins A and C. Nice if served alone or with red fleshed varieties. Being mild and free of acidity, they are preferred by many to the best red tomatoes. If you are one of the few who have not enjoyed the delicious flavor and good eating qualities of Burpee's Jubilee Tomato, the All-America Winner, be sure to grow it this year. A taste thrill is in store for you. Ready in about 72 days. **Pkt. 20¢; 1/4 oz. 50¢; 1/2 oz. 85¢; oz. \$1.60; 1/4 lb. \$4.75**

Sizes and weights of tomatoes

given in our descriptions are for the general field-run of fruits. Customers often write us that they have produced tomatoes bigger than we state they will grow. This is not surprising for with special care, proper fertilizing, watering, pruning, staking, etc., they may easily do better than we claim. This might readily apply to other vegetables, as well as tomatoes.

Three of the Best Tomatoes for the Home Garden

Pink Fruited Tomatoes

1092 Burpee's Globe —Extra choice

80 days. Decidedly distinct tomato of superior merit. The strong, healthy vines produce an enormous crop of uniform, medium to large size, rich, pinkish red tomatoes. The globe-shaped fruits grow in clusters of 6 to 10; solid, meaty, and free from any core. Contains little or no acid and is a shy seeder, the seed cavities being full of solid meat. Excellent for home and market garden where a main-crop pink tomato of solidity and quality with high yielding ability is desired. Adapted to pruning and staking as well as greenhouse forcing.

Pkt. 15¢; 1/2 oz. 55¢; oz. 95¢; 1/4 lb. \$2.75

1114 True Giant Ponderosa

83 days. Grow extremely large and are full of luscious, juicy flesh. The seed cavities are remarkably small, which accounts for the solid meat. It is not unusual for the tomatoes to weigh 24 ozs. and more, though the average runs around 9 ozs. They are deep and somewhat flattened. Persons who do not care for the acid flavor of the deep red tomatoes will find in Ponderosa a very palatable and tasty fruit of a delightful mild flavor. Essentially a home garden tomato although it finds ready sale on local markets.

Pkt. 15¢; 1/2 oz. 65¢; oz. \$1.25; 1/4 lb. \$3.75

1085 Sweetmeat —Burpee introduction

66 days. Semi-globular in shape, weighing 5 ozs. and more; ripen evenly throughout. Flesh is solid, fine grained and of the most delicious flavor. Sweetmeat fills a definite place as a uniformly colored pink of second-early season. Quite free from cracking.

Pkt. 15¢; 1/2 oz. 50¢; oz. 90¢; 1/4 lb. \$2.60

1091 Oxheart —Extra large, deep fruits

86 days. One of the largest tomatoes ever introduced, some weigh as much as 2 lbs. each. The oxheart shape of the pinkish red fruits is most distinct; interior is extremely solid with thick, firm walls and small seed cavities with few seeds. Primarily a home garden variety but readily salable on local markets and roadside stands.

Pkt. 15¢; 1/2 oz. 75¢; oz. \$1.40; 1/4 lb. \$4.25

Burpee's Globe

Mulching tomato plants with a heavy layer of straw to retain soil moisture usually results in larger yields over a longer period of time, cleaner fruits, less cracking and less loss from blossom-end rot; it keeps down weeds, too.

Burpee's TURNIPS

At their best when growth is made during cool weather. Plant the Extra Early Milan varieties in the spring for their roots and the foliage types for their tops which are much used for "greens." Pkt. 10¢; oz. 25¢; ¼ lb. 75¢; ½ lb. \$1.25

How to Grow TURNIPS

Sow the Milan and Foliage varieties in the spring as soon as the soil can be worked; space rows 12 to 15 in. apart. Thin seedlings to stand 3 to 6 in. apart in the row. For succession, make 2 or 3 sowings at two-week intervals. For fall and winter crop, sow in late summer in rows or broadcast about 3 months before your first expected hard frost. A pkt. will plant about 50 ft. of row; an oz. 250 ft.

RUTABAGAS or SWEDE TURNIPS

Rutabagas require a longer season to mature than turnips and are best grown as a fall crop. Sow seed from early to late midsummer, in rows 15 to 24 in. apart. Cover with ½ in. of fine soil and thin the seedlings to stand 6 to 8 in. apart in the row. May be stored in a cool cellar or pit and used throughout the winter. Burpee's Hardy Garden LILIES

Easy to grow in any good, well-drained garden loam to which has been added a generous quantity of leafmold. Once established, they will increase in beauty each year. Most all lilies delight in a sunny location, but mulch so that the hot sun does not reach the soil around the base of the plant. All varieties offered are highly decorative in the border, while the dwarfier ones also give a charming touch of beauty to the rock garden. Lily bulbs differ greatly in size according to variety—some 1 in. across, others 3 in. or more; we supply the sizes which will give the best results. We do not recommend Hardy Lily bulbs for house culture.

DEAR FELLOW GARDENERS:

Seventy-two years ago, my father started this seed business in Philadelphia.

Now, in order to give better service to those of you who live in the central and western states, we also carry a complete line of the best seeds and bulbs at the Burpee Midwestern Headquarters in Clinton, Iowa.

During recent years, on our seed farms in many parts of the United States, we have been doing more breeding and experimental work than ever before. Some of the most valuable new vegetables developed recently on our seed farms are the hybrid tomatoes, hybrid cucumber and hybrid eggplant, which are more productive, of better quality and more resistant to disease than the older varieties.

In flowers, the greatest advance has been made in the Luther Burbank Zinnias and the Burpee Double Snapdragons, the Tetra Snapdragons, Tetra Phlox, new Giant Marigolds, and both single and alldouble Petunias.

Many of you who read this have planted Burpee Seeds year after year. I want to tell you how much I appreciate the confidence you have shown in us for so long a time. Also, I wish to greet the many new customers who will purchase seeds from Burpee for the first time this year.

When you order from this catalog, as a token of friendship, I am going to send you, with my compliments, seed of two of our finest new flowers.

You have my best wishes for a most successful garden in 1948.

Faithfully yours,

David Burpee

President
